ZELL'S DESCRIPTIVE HAND-ATLAS consists of an entirely new series of Maps suitable to the requirements of the present time. They combine the requisite essentials of CLEARNESS OF EXECUTION and FACILITY OF REFERENCE, and are accompanied by an INDEX TO EACH MAP, and other statistical information. The Atlas presents the results of the most recent discoveries, and embodies all the latest political changes throughout the World.

* A special feature of the Atlas is that the comparative populousness and importance of the various towns are indicated on the Maps by the character of the type employed. The Index accompanying each Map is classified under descriptive heads, and furnishes additional information, such as the extent and population of countries, provinces, and towns, the heights of mountains, lengths of rivers, &c.

Besides the English names given on the Maps, the Indices supply the forms known to the inhabitants of the country in which the place is situated, as for example "Vienna, *Wien*; Antwerp, *Anvers*; Cologne, *Köln*." The references to the Maps in these Indices are by letters on the top and side of the Map, which guide to the square containing the name required. Each reference further states the name of the country, province, or other division in which the place is found.

* Omitted in the United States, because of the extraordinary rapid growth of its cities and towns.

GENERAL INDEX.

INTRODUCTION.

NOTES ON PHYSICAL GEOGRAPHY

LAND AND WATER.

THE SURFACE OF THE EARTH consists of Land and Water, which are very unequally distributed, the land occupying little more than one-fourth of the whole, and the water nearly three-fourths. The entire area of the world is estimated at about 197 millions square miles, 52 millions of which are land and 145 millions water. A glance at the Map of the World will show that by far the greater proportion of the land lies in the Northern Hemisphere, or part of the world north of the equator; there being about three-fourths of it in the Northern Hemisphere, and about one-fourth in the Southern. It will be seen further that the Eastern Hemisphere contains about double the amount of land in the Western; and, if we divide the world into North-Western and South-Eastern Hemispheres, with the British Islands as the centre of the former and New Zealand as the centre of the latter, the North-Western Hemisphere will be found to consist mainly of land, and the South-Eastern mainly of water. The line across the ocean from New York to Liverpool, in that great highway of nations, the Atlantic, occupies nearly the centre of the terrestrial hemisphere. This fact may not be a little explanatory of the commercial eminence of the two great Anglo-Saxon nations.

THE LAND is properly divided into two great continents, the Eastern or Old World and the Western or New World. As has already been remarked, the area of the Old World is nearly double that of the New. The Old World consists of a large mass in the east, called *Asia*, and of the peninsulas of *Europe* in the west, and *Africa* in the south-west. The New World consists of *North America*, and the peninsula of *South America* attached to it. These divisions of the two great continents are generally themselves spoken of as continents, and to them has been added another, embracing the large island of Australia and numerous others in the Southern Ocean, under the name of *Oceania*. There are thus six continents or great divisions of the earth—Europe, Asia, Africa, North America, South America, and Oceania, the respective areas and populations of which will be found in the text accompanying the Map of the World.

THE WATER on the earth's surface, though forming one continuous ocean, has been divided into five great portions, themselves called oceans. These are the *Atlantic* Ocean, between Europe and Africa on the east, and North and South America on the west; the *Pacific* Ocean, between America on the east, and Asia and Australia on the west; the *Indian* Ocean, between Australia and Africa; the *Arctic* Ocean, lying round the North Pole; and the *Antarctic* Ocean, lying round the South Pole. It is interesting to note that, if we include the Arctic and Antarctic Oceans in the others, we will have three great oceans corresponding very much in position and extent to three great land masses, viz., the Pacific to the Old World, the Atlantic to the New, and the Indian to Australia.

The *Atlantic Ocean* is the best known division of the world of waters, for on its coasts all the civilised nations of the earth may be said to be seated. It received its name either from Mount Atlas, in Barbary, or from the fabulous island of Atlantis, supposed to have been situated in this portion of the ocean, off the Pillars of Hercules (Straits of Gibraltar). It extends from the Arctic to the Antarctic Circles, a distance of 9000 miles, and varies in breadth from 1000 to 4000 miles, covering an area of about 25 millions square

miles. Its greatest depth yet ascertained is about 25,000 feet,* or nearly five miles. In its northern half the Atlantic is remarkable for the deep indentations of its coast, which account for its immense extent of shore. The principal of these are the Baltic, North, and Mediterranean Seas, on the east, and Hudson's Bay, Gulf of St Lawrence, Gulf of Mexico, and Caribbean Sea, on the west. In its southern half the Atlantic coasts are comparatively free from indentation, but they are remarkable for their correspondence to each other; thus the Caribbean Sea corresponds to the opposite projection of Senegambia, and the projection of Brazil to the Gulf of Guinea. The projection at Newfoundland in the North Atlantic may also be said to correspond to the opening between Spain and Ireland. The principal islands in the Atlantic are Iceland, Faroe Isles, British Isles, Newfoundland, Islands of the Gulf of St Lawrence, Bermudas, West India Islands, Canaries, and Cape Verd Islands, in the North Atlantic; and, in the South Atlantic, Ascension, St Helena, Falkland Islands, and South Georgia.

The *Pacific Ocean*, the largest of the great divisions of the water on the earth's surface, separates America on the east from Asia and Australasia on the west. The greatest length from north to south is upwards of 9000 miles, and its greatest breadth upwards of 10,000. Its area is estimated at from 50,000,000 to 65,000,000 square miles. It occupies about two-fifths of the surface of the earth; it is considerably larger than the whole of the land; and it contains half of all the water surface.

The waters of this ocean were first seen by Vasco Nunez de Balboa, a Spaniard, who smuggled himself on board a ship in a cask, in order to join an expedition to Darien in 1510, commanded by Francisco de Enciso. He ultimately obtained supreme command in the new colony, and having heard accounts of a great western ocean, in 1513 he started in search of it, and on the 25th September of the same year he first got a glimpse of it from the top of a mountain on the Isthmus of Panama. It was first crossed in 1520 by Fernando De Magellan or Magalhaens, a Portuguese, who sailed through the strait, which bears his name, between Patagonia and Tierra del Fuego, and reached the Philippine Islands. It was he who gave this ocean its present name, on account of the fine weather which he experienced, but subsequent voyagers have shown that the name is appropriate to only certain portions of it.

The Pacific is connected with the Arctic Ocean by means of Behring Strait. Its coasts present a general similarity to those of the Atlantic. On the American side its coast is very little broken by inlets, the chief being the Gulf of California and the Bay of Panama, and it is remarkably destitute of islands; but on the Asiatic side the coast is extremely irregular, being deeply indented by Behring Sea, the Sea of Okhotsk, Sea of Japan, Yellow Sea, China Sea, Java Sea, &c.

The Pacific is studded with countless islands, many of which are of volcanic, and others of coral formation. Its archipelagoes or groups of islands form one of its distinctive features, though there are besides numerous solitary islands and reefs scattered over its immense surface. The principal island-groups will be readily distinguished on the Map of the World. See also subdivisions of Oceania, on page 1 of Index to Map 1.

The principal currents of the Pacific are described in the article "Ocean-Currents," in the text accompanying Map 1.

The drainage received by the Pacific is insignificant, when compared with its immense extent. It consists on its American side of the short rivers draining the slope to the west of the Rocky

* The actual measurement is 3,875 fathoms (23,250 feet).—*Voyage of the Challenger* (1877).

Mountains and the Andes, and on its Asiatic side, of the rivers of the Chinese Empire and of Indo-China.

The Indian Ocean, so called from its washing the shores of the great Indian peninsula, extends from that territory to the Antarctic Ocean, and from Africa and Arabia to the islands of Australasia, and is connected with the Pacific by the openings through the Indian Archipelago. Its greatest length and breadth are each estimated at about 6000 miles, and its area at about 20,000,000 square miles. Its principal arms are the Bay of Bengal, the Arabian Sea, Persian Gulf, and the Red Sea.

It receives the waters of many of the immense rivers of Asia, and is remarkable for its numerous islands, the largest of which are Madagascar, east of the African continent, and Ceylon, south-east of Hindostan.

The Arctic Ocean surrounds the North Pole, and is bounded towards the south by the northern shores of the two continents, and the northern limits of the Atlantic and Pacific Oceans. It is connected with the Atlantic by the opening between Greenland and the north-west of Europe, and by Davis Strait, and with the Pacific by Behring Strait. Its area is estimated at about four million square miles. Its branches are the White Sea and Kara Sea, in Europe; and the Gulfs of Obi and Yenisei, and other smaller inlets, in Siberia; and, in America, Baffin Bay, Davis Strait, and Hudson Bay are properly parts of this ocean, although they are generally assigned to the Atlantic. The chief rivers it receives are the Obi, Yenisei, Lena, Indigirka, and Kolima in Asia, and the Mackenzie in America. Principal islands, New Siberia and Wrangel in Asia, Novaia Zemlia, Spitzbergen, and the Lofoden Islands in Europe, and the Arctic Archipelago in America. The chief productions of the Arctic Ocean are the whale, found chiefly near its confluences with the Atlantic and Pacific Oceans, and the bones of the mammoth, which are found in great abundance on the shores of Eastern Siberia. During winter, the region round the North Pole is covered in every direction with ice, embracing an extent of from 3000 to 4000 miles; and even during the brief summer, which lasts only one-third of the year, the surface is always at freezing point. Immense bergs and floes of ice are continually drifting from this ocean into the Atlantic; some of these icebergs 100 miles in length, and 30 miles in diameter.

Many attempts have been made to discover a passage to the Pacific along the N. shores of America. This (*North-west Passage*) was discovered by Captain McClure in 1856, who sailed out of the Pacific by Behring Strait, through Melville Sound, to Baffin's Bay, Davis Strait, and the Atlantic. Nordenskiöld accomplished the *North-east Passage* around Norway and the coast of Siberia in 1878. The highest lat. reached in the Arctic Ocean is $83^{\circ} 20' 26''$, 399½ miles from the pole.

The Antarctic Ocean, or Southern Ocean, is that part of the great ocean lying around the South Pole, and, in general terms, it may be said to extend from the Antarctic Circle to the South Pole. It has been explored, more or less satisfactorily, by various navigators, as far as 79° S. But little of it, however, is accurately known, owing to the difficulties and dangers of its navigation. Such lands within it as are accessible are valuable in connection with the whale and seal fisheries. The area within the Antarctic Circle is now known to be occupied by a continent considerably larger than Europe, covered with snow and ice. On the coast of Victoria Land, which lies beyond the parallel of 70° , two mountains have been discovered—one, Mount Terror, 10,000 feet in height, and the other a volcano, called Mount Erebus, 12,400 feet high. The latter is believed to be the only phenomenon of the kind in either of the frigid zones. The characteristic features of this ocean have been stated to be "constant fogs, baffling currents, innumerable icebergs, and magnificent manifestations of the aurora Australis."

ELEVATION OF THE LAND.

The subject of the relief or elevation of the land of the earth has been the study of many eminent geographers. Our limits will permit only of a simple statement of the principal laws which they have discovered with regard to mountains and table-lands, or plateaus.

(1.) All the continents rise gradually from the shores of the ocean towards the interior to a line of highest elevation.

(2.) In all the continents this line of highest elevation is not in the centre, but towards one of the sides. As a result of this there

are in each continent two slopes—a long slope and a short slope, the former of which is called the slope, and the latter the counter-slope. It necessarily follows that the slope produces long rivers, and the counter-slope short ones. This is strikingly observable in the American continent, where the rivers flowing into the Pacific Ocean are short and rapid, while those flowing into the Atlantic and Arctic Oceans have a long and comparatively gentle course.

(3.) The greatest elevations of a continent are in the direction of its greatest length. The greatest length of the Old World is from west to east, so also is the line of its greatest elevation, beginning with the Atlas Mountains and mountains of Spain in the west, and continued by the Alps, Carpathians, and the Caucasus range to the Himalayas in the east. Again, in the New World, the greatest length of the continent is from north to south, and the line of greatest elevation begins with the Rocky Mountains in the north, and is extended by the Andes to Patagonia in the south.

(4.) As a general rule, the elevations of the continents go on increasing from the poles to the tropical regions. Thus the highest elevation in the Old World is in the Himalayas, 27° north latitude, in the neighbourhood of the Tropic of Cancer; and the highest elevation of the New World is in 32° south latitude, in the neighbourhood of the Tropic of Capricorn. In the words of Guyot (*Earth and Man*), "We may in this perceive one of the great compensations, one of the great harmonies of nature. The effect of this law of arrangement is to temper the burning heats of the tropical regions, and to give them a variety of climate. If this order were reversed, and the elevation of the lands went on increasing towards the north, the most civilised half of the globe at the present day would be a frozen and uninhabitable desert." A list of the principal mountains of the world, with a diagram of heights, will be found in the descriptive text accompanying the Map of the World.

WINDS.

Winds vary in their rate of velocity from a few miles an hour to 100 miles in an hour. The rate of what is called a breath of air is about 1 mile an hour, that of a strong gale 40 miles an hour, that of a storm 50 miles, and that of a hurricane 100 miles an hour. Winds are distinguished as trade-winds, periodical winds, and variable winds. The trade-winds are so-called from the service they render to navigation, since they preserve a steady course throughout the year, within 30° on each side of the equator. Their full force is felt only in the Atlantic and Pacific Oceans. They advance in a northerly direction from January to June, and in a southerly direction from July to December. In the Atlantic the north trade-winds prevail between latitude 9° and 30° , and the south trade-winds between latitude 4° north and 22° south. In the Pacific the north trade-winds prevail between latitude 9° and 26° , and the south trade-winds between latitude 4° north and $23\frac{1}{2}^{\circ}$ south.

Of the periodical winds, the most important are the monsoons in the Indian Ocean, blowing from April to October from the south-west, north of the equator, and in the southern hemisphere from the south-east; while from October to April they blow from the north-west, south of the equator, and in the northern hemisphere from the south-east. Of other periodical winds the most general are what are called land breezes and sea breezes, which prevail chiefly in tropical regions, the land breeze blowing during the night, and the sea breeze during the day.

Of the variable winds, occasioned by local or temporary causes, the most important are the *Simoom*, a hot, poisonous wind prevailing in Egypt, Arabia, and other countries that border on sandy deserts; the *Sirocco*, another hot wind, blowing from the Sahara or Great Desert in Africa over the south of Italy; the *Solano*, a hot south-east wind in the Spanish peninsula; the *Harmattan*, a kind of simoom, on the west coast of Africa; the *Puna Winds*, dry and parching winds prevailing for four months in the year in a high barren table-land in Peru, called the Puna; the *East Winds* of the British Islands; the *Bise*, a cold north-east wind blowing on the northern shores of the Mediterranean Sea; the *Etesian* or annual winds, prevalent in summer over the Mediterranean Sea; the *Mistral*, a violent north-west wind, felt especially in the south-east of France; and the *Pampero*, a violent dry west wind, blowing in summer from the Andes, across the pampas or plains of Buenos Ayres to the sea-coast.

CAUSES AFFECTING CLIMATE.

The chief causes that affect the climate of a country are—

- (1.) Its latitude, the average heat throughout the year decreasing from the equator to the poles. Within the Tropics the temperature is comparatively uniform throughout the year; in the Temperate Zone the differences of temperature are very great; while in the Frigid Zones the mean temperature is very low, the short Arctic summer being characterised by intense heat, and the long winter by excessive cold.
- (2.) Its elevation above the level of the sea, temperature decreasing from the sea-level to the region of perpetual snow.
- (3.) Its proximity to the sea, the temperature of the sea being much more equable than that of the land.
- (4.) Its slope or aspect as regards the sun at noon.
- (5.) The character of the surrounding country, whether high or low, &c.
- (6.) The direction of mountain-chains.
- (7.) The character of the prevailing winds.
- (8.) The influence of ocean-currents.
- (9.) The amount of the annual rain-fall.

THE DISTRIBUTION OF RAIN.

The following are the principal facts in connection with the fall of rain, which varies very much in different parts of the globe:—

- (1.) More rain falls in the western than in the eastern hemisphere, the ocean being the great source from which rain is derived, and there being a greater collection of water in the western hemisphere than in the eastern.
- (2.) The amount of rain-fall annually is greatest within the tropics, and it decreases from the equator to the poles. This is owing to the fact that the process of evaporation, by which rain is produced, is much more rapid in warm countries than in those more temperate.

The countries in which there is most rain are, in the Old World, the coasts of Guinea and Senegambia on the west of Africa, the eastern coast of Africa, India, and the islands of the Indian Archipelago; and in the New World, the coasts of the Gulf of Mexico, Central America, the West India Islands, Guiana, and Brazil.

- (3.) Countries within ten degrees of the equator have two rainy seasons and two dry seasons, and intertropical countries beyond the tenth degree of latitude have only one rainy season and one dry season. This is accounted for by the fact that within the tropics the rain follows the sun.

(4.) In India the course of the rain depends upon the monsoons, the Malabar coast having its rainy season during the northern summer, and the Coromandel coast during the northern winter.

- (5.) Within the tropics the greatest rain-fall is in summer, and beyond the tropics in winter.

(6.) Regions without rain:—In the Old World, a tract extending across Africa and Asia from 16° west to 118° east longitude, and varying in breadth from the 15th to the 47th parallel of latitude, comprising the Sahara of Africa and the deserts of Arabia, Persia, and Mongolia; in the New World, the coast of Peru and Bolivia, lying between the Andes and the Pacific, and extending from the 4th to the 27th parallel of latitude.

- (7.) More rain falls on elevated regions than on plains.

(8.) The side of a mountain-range, which is exposed to the sea-winds, receives more rain than the other side.

- (9.) The amount of rain decreases from the shore of a continent to its interior.

The annual amount of rain-fall in different parts of the world is shown in the following table:—

	Lat.	Rain per Annum in Inches.
Singapore,	N. 1 16	97
Maranhao (Brazil),	S. 2 30	280

Cordilleras (Chili),	42½	6,010
Magellan Strait,	53½	3,707

ON THE PROGRESS OF GEOGRAPHICAL DISCOVERY.

From the earliest ages war between neighbouring nations and the pursuit of commerce have been the great causes which have led to geographical discovery. In modern times the love of science and a spirit of adventure have produced expeditions, both public and private, for the exploration of unknown regions.

The first people who communicated to other nations a knowledge of distant countries were the Phœnicians, whose territory skirted the eastern coasts of the Mediterranean Sea. Phœnicia consisted of several cities, each of which was an independent state.

Of these the more important were Sidon and Tyre, the latter of which, in the reign of Hiram, its second king, acquired supremacy over the others, and became the greatest commercial city in the ancient world. Hiram was an ally of the Jewish king, Solomon, in whose navy he sent his servants, shipmen, that had knowledge of the sea, with the servants of Solomon. And they came to Ophir (supposed to have been the general name of the eastern coast of Africa and other countries round the western branches of the Indian Ocean), 'and fetched from thence gold.' . . 'great plenty of

almug-trees, and precious stones' . . . and 'the king' (Solomon), 'had at sea a navy of Tharshish. with the navy of Hiram: once in three years came the navy of Tharshish, bringing gold, and silver, ivory, and apes, and peacocks.'—1 Kings ix. and x.

Previous to 800 B.C., or the age of the Greek poet Homer, the Phœnicians had formed commercial establishments along the coast of Asia Minor and the shores of the Black Sea. Sailing westwards, they had occupied the chief islands of the Mediterranean, and had founded colonies along the northern coast of Africa. Continuing their course of commercial enterprise, they planted colonies in the south-west of Spain (the ancient Tharshish), passed the Straits of Gibraltar (the ancient Pillars of Hercules, the national deity of the Tyrians), and penetrated to the British Islands and the coasts of the North Sea, carrying back with them to the great cities of Sidon and Tyre the tin of Cornwall, and amber from the coasts of Prussia. Of all their colonies the most important were those on the north coast of Africa, the city of Carthage, founded about 900 B.C., rivalling Tyre itself in wealth and prosperity. Carthaginian navigators are believed to have visited the island of Madeira and the Canary Islands, and to have sailed as far south along the western coast of Africa as Cape Blanco. During the seventh century B.C., they are said to have circumnavigated Africa, having entered the Indian Ocean by the Red Sea, and returned to Egypt by the Straits of Gibraltar, after an absence of three years.

Herodotus, the oldest Greek historian (born at Halicarnassus 484 B.C.), hence called 'The Father of History,' may also be styled 'The Father of Geography,' for in his history of the wars between the Greeks and Persians we find an account of the geographical knowledge of his time. Having himself travelled for about 1700 miles from east to west, and nearly as far from north to south, his statements are the more to be relied upon, and from them we gather that the world, as then known, was bounded on the south by the Indian Ocean, on the west by the Atlantic, on the north by the Baltic Sea, and on the east by the eastern limits of Persia.

The ancient Persians, averse to the sea, turned their attention to conquest by land, carrying their arms to the north and east, and conquering portions of India, from which country so many precious articles had previously been brought as to excite the cupidity of western nations; but it was left to Alexander the Great of Macedon (between 336 and 323 B.C.) to open up to Europeans the road to India, and give them the first glimpses of the magnificence and splendour which had dazzled their imagination for two thousand years.

While Alexander was carrying his arms to the banks of the Indus and Oxus, Pytheas, a Greek navigator, of the Grecian colony at Marseilles, sailed past Spain and Gaul, now France, through the English Channel, and round the east coast of England, into the Northern Ocean, where, after six days' sailing, he reached Thule (supposed to be Iceland or the Shetland Isles), and, on his return, passed into the Baltic.

The Persian Empire having been subverted by Alexander the Great, the dominions of the latter were in their turn overrun by the Romans, who were more remarkable for their conquests than for their maritime discovery or encouragement of trade. The Roman Empire may be said to have included all the countries between the Euphrates and the Atlantic. In Europe it extended from Spain on the west to the rivers Rhine and Danube. It included part of Britain, which was for the first time circumnavigated by the Roman general, Agricola, in 84 A.D., and it was during this voyage that the Orkney Islands were discovered. Ireland was known to the Romans only by name. In the north-west of Europe, the countries on the Baltic Sea were little known to the Romans, who seem to have considered Norway, Sweden, and Finland as islands of the German Ocean. In Africa they occupied the territories formerly belonging to the Egyptians and Phœnicians, embracing the whole of the northern coast, and extending southwards to the desert. India became known to them after their conquest of Egypt, but they were chiefly acquainted with only its western coast and with Ceylon, Malacca, and Sumatra.

Great service was done to geographical knowledge by a survey of the Roman Empire, begun by Julius Cæsar and completed by the Emperor Augustus. The *Historia Naturalis* of Pliny (23–79 A.D.), gives an admirable compendium of the geographical knowledge of his time. He had travelled in Spain, Gaul, Germany, and Africa, and in the work he has left he notices the Arctic regions, Scandinavia, Mount Atlas, the course of the river Niger in Africa, and various settlements in the north of that continent. He also declares

Ceylon to be an island, although it was previously supposed to be the commencement of a new continent. Geographical study in ancient times may be said to have terminated with Claudius Ptolemæus, a celebrated astronomer and geographer of Egypt during the second century. His great work on geography, in eight books, continued to be regarded as the most perfect system of the science down to the fifteenth century.

During the ninth century two Arabian travellers penetrated to China, and Arabian geographers had their knowledge of Asia and Africa considerably extended. In the same century Alfred, King of England, sent a present to the shrine of St Thomas, near Madras, on the Coromandel coast of India.

The Crusades of the eleventh and twelfth centuries served greatly to extend European geographical knowledge. The existence of the great empire of Cathay or China was further reported by two friars who had been despatched to the east by Pope Innocent IV. about the middle of the thirteenth century, but it was reserved for Marco Polo, a Venetian, before the end of the same century, to astonish Europeans by the discovery of about one half of Asia. He was the first to notice Japan, the great plain of W. Siberia, the Spice Islands, &c. The further history of discovery in Asia is contained in the following notes:—

16th century. The coasts of the Malayan Peninsula, Siam and Cochin China explored by the Portuguese, who also discovered the Philippine Islands, Celebes, New Guinea, and others.

1598. The river Yenisei discovered by the Russians.

1640. The river Lena discovered by them.

1644. The Middle Amoor and Lower Amoor discovered by the Russians.

1648. The river and Gulf of Anadyr and Behring Strait discovered by the Russians.

1696. Kamtschatka annexed by Peter the Great of Russia.

1711. The islands of New Siberia discovered.

1741. Behring crosses to America.

During the eighteenth century the greater part of the interior of China was explored by the Jesuits, and since then Russian influence has been largely extended over the northern portions of that empire. Investigations into the interior of the other countries of Asia are still being conducted by officers of the British army and by other explorers.

Progress of Discovery in America.—The first Europeans who visited America were the Scandinavians, who colonised Iceland in 875 A.D., Greenland in 983, and about the year 1000, had discovered North America, as far south as the present State of Massachusetts. But it was not known to Southern Europe until the latter part of the fifteenth century, when it was discovered by accident during a voyage in quest of a westerly route to India and China. In 1492 Columbus, a Genoese, set out on a voyage of discovery under the patronage of the crown of Spain. He made in all four voyages. His discoveries and those of subsequent explorers are given in chronological order in the following table:—

1492. One of the Bahama Islands, Cuba, and Hayti, discovered by Columbus.

1493–4. Dominica, Guadaloupe, and Jamaica, discovered by Columbus.

1497. Newfoundland and portions of the adjacent continent discovered by John Cabot.

1498. Trinidad and the opposite mainland discovered by Columbus.

1499. The Bay of Paria, and hundreds of miles along the coast, explored by Amerigo Vespaeci, a Florentine (from whom America was called), in an expedition under the Spanish admiral Hojeda.

1500. The coast of Labrador, and the entrance to the Gulf of St Lawrence, explored by two Portuguese brothers called Cortereal.

1502. Central America, from Honduras southwards, and South America, from the mouths of the Orinoco to the island of Margarita, explored by Columbus.

1508. The river St Lawrence discovered by Aubert.

1512. Florida discovered by Ponce de Leon.

1513. The Pacific Ocean described by Balbao.

1514 from 1500. The Eastern coast of South America, from the Orinoco to 40° S. lat., explored by Pinzon and Solis.

1519. Magellan, a Portuguese, passed through the straits that bear his name, and was the first to circumnavigate the globe.
1521. Mexico conquered by the Spaniards.
1534. The river St Lawrence explored by Jacques Cartier as far as Montreal.
1535. Buenos Ayres founded by the Spaniards.
1539. Florida explored by Fernando de Soto.
1540. Peru conquered by the Spaniards.
The river Amazon explored from its source to its mouth by Orellana.
- 1540-60. The continent explored by the Spaniards from the south of Chili to the Gulf of California.
- 1576-78. Frobisher discovered the strait that bears his name.
1578. Upper California discovered by Drake, an English navigator.
- 1585-88. John Davis sailed up the strait which bears his name as far as 72° north.
1610. Henry Hudson discovered what are called Hudson Strait and Hudson Bay.
The passage round Cape Horn discovered by Schouten, a Dutch navigator.
1616. Lemaire, a Dutchman, passed through the strait bearing his name, between Staten Land and Tierra del Fuego.
Bylot and Baffin sailed up Davis Strait. Reaching 78° north, and discovering no outlet, they called this part of the sea Baffin Bay. They also discovered on the west Lancaster Sound.
1631. Fox and James discovered Fox Channel, the northern outlet to Hudson Bay.
1682. The river Mississippi descended by the French.
- 1741-46. Various expeditions; no outlet discovered from the north-west of Hudson Bay.
1771. Hearne proceeded from Hudson Bay to the mouth of the Coppermine River.
1789. Alexander Mackenzie reached the mouth of the river that bears his name.
1793. Mackenzie passed through the territory now called British Columbia to the Pacific Ocean.
1818. Ross and Parry ascended Lancaster Sound for thirty miles. Ross abandoned farther search.
1819. Parry entered Lancaster Sound and discovered a large inlet thirty miles broad, which he called Prince Regent Inlet. Having returned, and continuing west, he passed through a strait which he called Barrow Strait, after Sir John Barrow, the promoter of the expedition, and ultimately reached 110° West in Melville Sound.
- 1821-23. Parry unsuccessfully attempted to determine whether the Fox Channel was connected with the Arctic Sea of his previous voyage.
The coast traced from Behring Strait to Point Turnagain in long. 109° W.
1829. Ross sails up Prince Regent Inlet, and reaches a point only 200 miles from Point Turnagain, and discovers the magnetic pole.
1838. Dease and Simpson extend the survey from Point Turnagain to within 90 miles of the magnetic pole.
1845. Expedition of Sir John Franklin, who is believed to have sailed up Baffin Bay, through Lancaster Sound, and south through the channel, separating Prince of Wales Island from North Somerset and Boothia Felix, where his ships became fast in the ice. The crews perished in their attempt to reach the mainland.
1850. Collinson and M'Clure, in search of Franklin, sail from Behring Strait, and become fixed in the ice in Melville Sound, 60 miles west of Barrow Strait.
1852. Belcher sent out to the assistance of the previous expedition, reaches Melville Sound by Lancaster Sound and Barrow Strait. Both expeditions return by Baffin Bay. M'Clure was thus the first to go from Behring Strait to Baffin's Bay, and so discovered *The North-West Passage*.
- 1850-53. Kane's Expedition. 1860-69 Hayes's Expedition, to lat. 81° 35'. 1860-64-71. Hall's Expedition. 1878-80. Schwatka's Expedition. Returning with the relics of the Franklin party. 1879-82. Jeannette, under De Long. Vessel crushed in the ice June 13th, 1881, in about lat. 77° N. and lon. about 155° E.

Exploration on the African coast is due chiefly to the Portuguese, who received information from the Moors. At the beginning of the 15th

century, they had sailed no further than Cape Nun, but by its termination they had reached the Cape of Good Hope, having discovered in succession Cape Bojador in 1415, the Canaries and Madeiras in 1418, Cape Blanco in 1441, the Senegal and Cape Verd in 1446, the Azores in 1448, Cape Verd Islands in 1449, Sierra Leone and the Guinea Coast in 1463, the Congo or Zaire River in 1484, and the Cape of Good Hope in 1486. By the end of the same century Vasco de Gama had explored (1497-99) the whole of the eastern coast from Natal to Magadoxo in 20° N. lat., the remainder having previously been explored by the Arabs. During the sixteenth century may be noticed the travels of Leo Africanus through Barbary and Sahara to Abyssinia, and the visit of the Portuguese to Monomotapa, then a powerful state near Mozambique. In the seventeenth century trade was established with Timbuctoo; a French colony was established (1662) on the Senegal; various unsuccessful attempts were made to reach the Niger, both from the Gambia and the Senegal; and a colony, now abandoned, was founded in Upper Guinea in 1683.

18th and 19th centuries.

- 1768-71. Bruce sailed up the Nile to Assouan, crossed the desert to Gondar, the capital of Abyssinia, and discovered the sources of what was then supposed to be the main stream of the Nile.
- 1795-1806. The Niger traced by Mungo Park from Bammakoo to Boussa.
- 1802-5. Lichtenstein travelled in the district north of the Cape of Good Hope, and was the first to give an account of the Betchuana Tribe.
1814. Burckhardt travelled through the Nubian Desert to the Red Sea.
1822. The upper course of the Niger explored by Major Laing.
- 1822-5. Denham and Clapperton travelled from Tripoli to Sokoto, and on their way discovered Lake Chad.
1826. Major Laing crossed the Sahara from Tripoli to Timbuctoo.
1830. The lower course of the Niger to the sea explored by Lander.
1848. Mt Kilima Njaro discovered by Rebmann in East Central Africa.
1849. Lake Ngami discovered by Livingstone.
- 1849-55. Barth explores from Tripoli in the north to the kingdom of Fumbina, in Soudan, in the south, and from the neighbouring kingdom of Bagirmi in the east to Timbuctoo in the west, a district extending over 24° of latitude and 20° of longitude, upwards of 12,000 miles.
- 1853-6. Livingstone crosses South Africa from the Zambesi to the Congo, and thence to Loando, the capital of Angola, re-crossing it on his return by Linyanti (lat. 18° 17' S., and long. 23° 56' E.), the capital of the Makololos, and along the banks of the Zambesi to Quillimane on the Indian Ocean.
1857. Lake Tanganyika discovered by Burton and Speke.
1858. The Victoria Nyanza discovered by Speke.
1859. Livingstone ascends the River Shiré, a tributary of the Zambesi, and discovers Lake Nyassa.
1863. Great Lake, west of Albert Nyanza, reported by Carlo Piaggia.
1864. The Albert Nyanza discovered by Baker.
- 1866-71. Livingstone ascends the River Rovuma, crosses the outlet of Lake Nyanza, discovers Lakes Liemba, Moero, and Bangweolo (11° S. lat.), and explores that region. D. 1873.
- 1871-72 } Stanley explores the Congo river and the Lualaba, establishes
1874-77 } their identity, and crosses Central Africa from the Indian Ocean to the Atlantic coast.

Exploration in Australasia.—It is considered probable that the island of Australia was known to the Chinese long before it had been visited by any European explorer. The following is a record of the principal incidents in connection with discovery and settlement in Australia and the neighbouring islands:—

1511. Papua or New Guinea discovered by the Portuguese.
1567. The Solomon Isles discovered by Mendana, a Spaniard.
1595. The Santa Cruz Isles do. do.
The New Hebrides visited by Quiros.
1606. The north coast of Australia described by the Dutch, who called it New Holland, and also by a Spanish expedition, one of the commanders of which gave his name to Torres Straits.
1619. The west coast of Australia described.
1622. The south-west coast of Australia seen.
1642. The island of Tasmania discovered by Tasman, a Dutchman.

- 1643. The Feejee Islands seen by Tasman.
- 1697. Swan River discovered by Vlaming.
- 1699. New Britain discovered by Dampier.
- 1767. New Ireland discovered by Carteret.
- 1769. New Zealand circumnavigated by Captain Cook.
- 1770. The east coast of Australia explored by do.
- 1774. The New Hebrides so named by Cook. See 1595.
- New Caledonia discovered by Cook.
- 1788. New South Wales established.
- 1790. Norfolk Island made a settlement for the mutineers of 'The Bounty.'
- 1791. Chatham Isles discovered by Lieutenant Broughton.
- 1798. Bass, a surgeon in the navy, sailed through the strait that bears his name, and ascertained the separation of Tasmania from Australia.
- 1800. The south-eastern coast of Australia surveyed by Grant.
- 1802. The south-western and north-eastern of Australia coasts surveyed by Flinders.
- 1806. The Auckland Isles discovered by Captain Bristow.
- 1825. Tasmania established as a colony. It was formerly called Van Diemen's Land in honour of the then governor of Dutch India.
- 1827. The Feejee Islands explored.
- 1829. Swan River or Western Australia established.
- 1834. South Australia established.
- 1841. New Zealand established.
- 1845. Sturt penetratès to the centre of the island of Australia, and reports it a vast lifeless waste.
- 1847. Leichhardt, after having journeyed from New South Wales to Port Essington in North Australia, started to cross the continent from Queensland to Western Australia, and has not since been heard of.
- 1851. The colony of Victoria established.
- 1853. New Caledonia taken possession of by France.
- 1858. The north-western parts of South Australia explored by John M'Douall Stuart.
- 1859. Queensland, formerly called Moreton Bay, established.
- 1861. Burke and Wills, having started from Melbourne, reached the Gulf of Carpentaria, being the first who crossed Australia from sea to sea. They never returned.

- 1862. After repeated failures Stuart succeeds in reaching the Indian Ocean at Van Diemen's Gulf, having started from South Australia.

Exploration in Polynesia,—

- 1521. The Ladrões or 'robber islands,' by Magelhaens. They were afterwards called Mariana in honour of the Queen of Philip IV. of Spain.
- 1595. The Marquesas by Mendana, a Spaniard, named in honour of the Marquis Mendoza, the Spanish governor of Peru.
- 1606. The Society Islands by Quiros, but named by Captain Cook in honour of the Royal Society.
- 1643. Tonga Isles by Tasman, afterwards called the Friendly Islands by Cook, who visited them in 1773 and 1777.
- 1686. The Carolines by Lazeano, a Spaniard, and named after Charles II. of Spain.
- 1696. The Pelew Isles.
- 1767. Pitcairn Island by Carteret.
- 1768. Navigator Isles by Bougainville, a Frenchman.
- 1778. Sandwich Islands by Captain Cook.
- 1788. Marshall and Gilbert Islands named after their respective explorers.

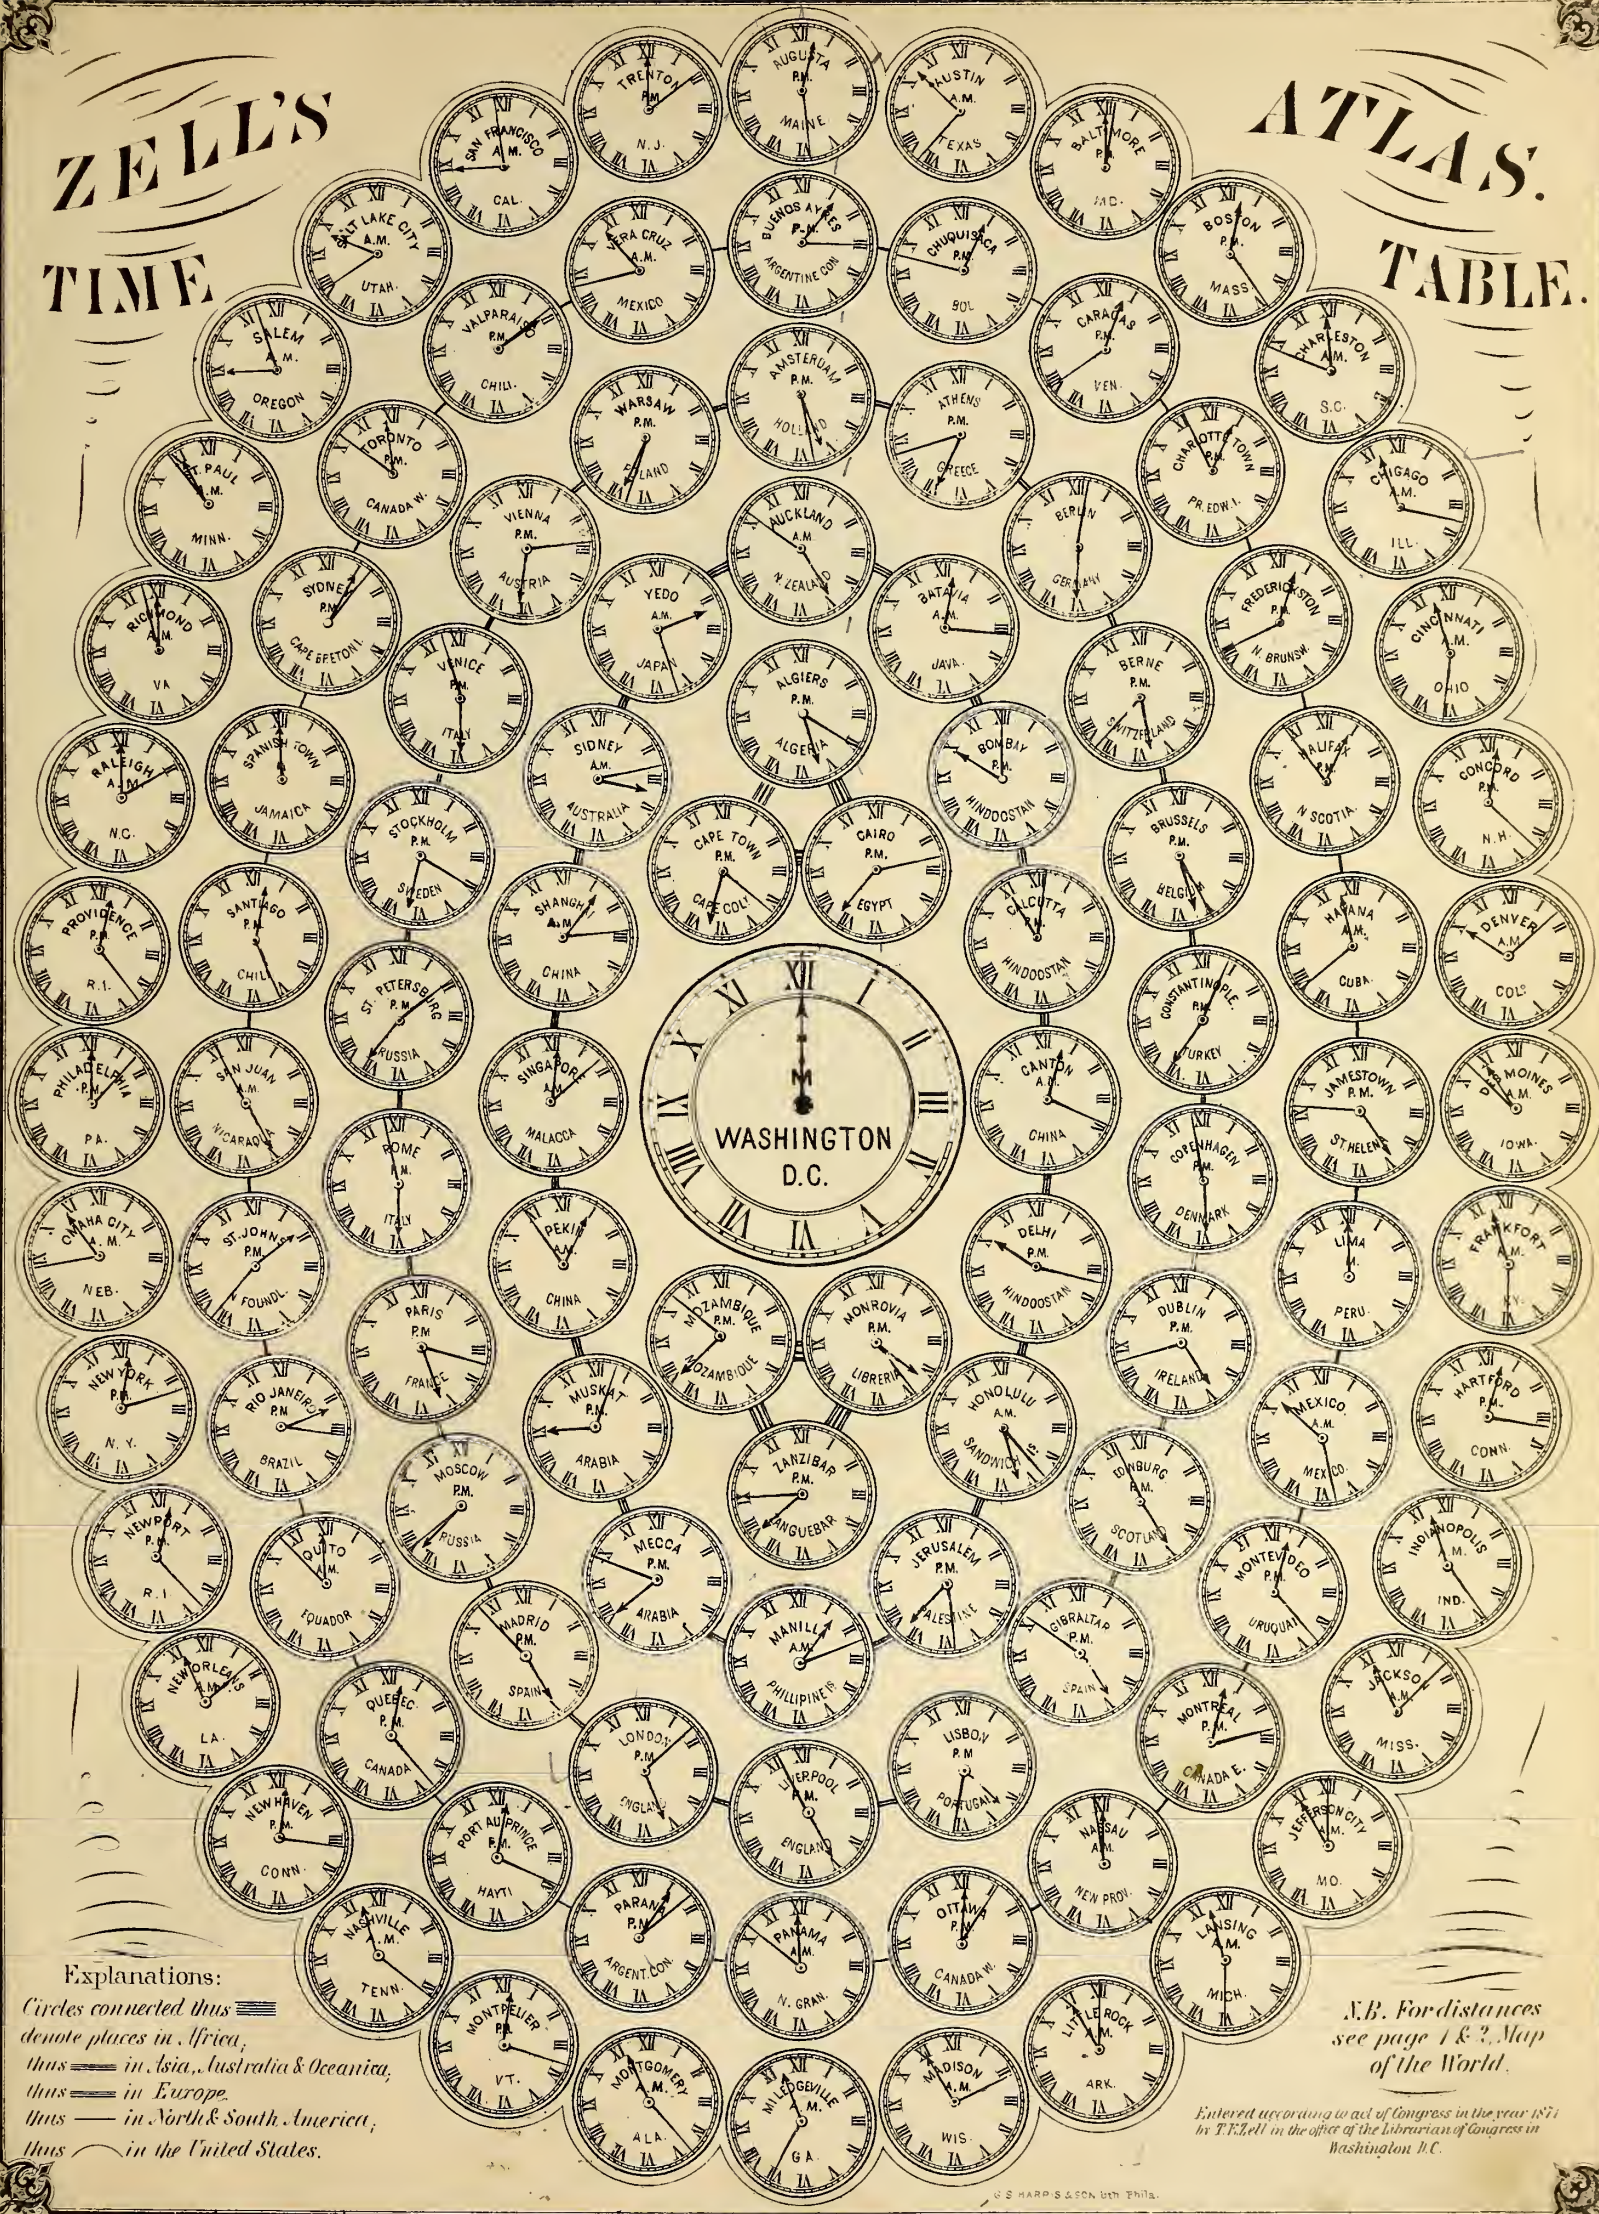

Antarctic Expeditions.

- 1772-75. Captain Cook crossed the Antarctic Circle, and penetrated to lat. 71° 10' south.
- 1821. Bellinghausen, a Russian navigator, discovered Alexander's Land and Peter's Land.
- 1823. Captain Weddell reached lat. 74° 15' South.
- 1831. Enderby Land discovered by Captain Biscoe.
- 1839. Sabrina Land discovered by Balleny in the sealing-schooner "Eliza Scott," from New Zealand.
- 1840. An Antarctic Continent discovered by a United States expedition under Captain Wilkes
- A line of coast on the Antarctic Circle discovered by a French expedition under D'Urville.
- 1841-43. Victoria Land discovered by Captain Ross, and the coast traced from lat. 71° to 78° 10' south, the highest southern latitude ever reached.

DESCRIPTIVE HAND-ATLAS OF THE WORLD

MAP OF THE WORLD ON SIR JOHN HERSCHEL'S PROJECTION.

THIS Map of the World has been constructed on Sir John Herschel's new projection, because it exhibits more clearly the relative proportions and positions of the various Continents, and more especially as it allows the Oceans to be seen in their unbroken extent, which is of great consequence in illustrating the courses of the currents, and the routes of the Ocean Steamers. The *repetition* of the Continents of Asia and America allows the Pacific Ocean to be seen entire, and the communication with China and the East may be traced from our ports either by the western route *via* Panama and San Francisco, or by the eastern *via* the Mediter-

anean Sea or the Cape of Good Hope, in either case the route being shown upon the Map without a break.

The general features of the Globe are represented on this Map, both political and physical, and the accompanying letterpress is intended to give further information in the form of statistical tabulated lists of all the principal Countries throughout the World, their Capitals with distance from New York—Sea Ports, Foreign Possessions, Ocean Steamer Routes, Mountains, and Rivers, with descriptive articles on the Ocean Currents, Races of Man, Religions, Climate, and Lines of Telegraph.

THE GREAT DIVISIONS OF THE EARTH.

	Statute Square Miles.	Population.
NORTH AMERICA . . .	8,215,000	70,151,654

OCEAN CURRENTS.

THE Ocean Currents, indicated on the map by *blue shaded lines*, result from the unequal temperature of the Ocean, and from its consequent constant tendency to equalization by the circulation of its waters, which is thus effected by three great fundamental streams—an *Equatorial*, an *Arctic*, and an *Antarctic*, the first of warm, and the last two of cold water, and the direction is shown on the map by *plain arrows* for the cold currents, and by *winged arrows* for the warm. The normal direction of both Polar Streams, in consequence of the revolution of our planet, is oblique, and towards the Equator. The *Antarctic Current*, encountering for many degrees little interruption from land, thus deflects gradually more and more to the eastward till about the 40th parallel, where it coincides with the warm currents of the South Atlantic and Indian Oceans flowing directly east. In the South Pacific it strikes the S. W. shores of South America, and there, in concentrated power, divides into two arms, the one following the coast northwards under the well-known name of *Humboldt's* or *Peruvian Current*; the other preserving more its easterly direction, doubles Cape Horn (*Cape Horn Current*), and crossing the S. Atlantic, forms on the S. W. shores of Africa a northward flowing current, analogous to the *Peruvian*. Australia is not reached by any part of this stream. Following the same laws, but constrained by the formation of the land into narrower channels, the Arctic Ocean sends southward the immense volume of cold water known as the *Greenland* and *Labrador Currents*, coursing the coasts of these countries, and bearing a freight of icebergs as far south as the 40th parallel, whence it flows under the Gulf Stream and along the coasts of the United States; also the *Behring Current*, of much smaller volume, through the straits of the same name. The utmost boundaries of the ice-drifts are shown on the map by dotted lines. The *Equatorial Stream* is divided according to the distribution of land and water into three parts,

the *Atlantic*, the *Pacific*, and the *Indian Currents*.—The *Atlantic Equatorial Current* divides into two branches. One flows southward (the *Brazilian Current*) as far as the Straits of Magellan; the other, sweeping across the Atlantic, flows through the Caribbean Sea and Gulf of Mexico at the rate of from 30 to 70 miles a-day, whence it issues as the *Gulf Stream*, whose heated waters (86° Fahr.) pass the Straits of Florida at the rate of 80 miles per day. This celebrated current traverses the Atlantic, sending one offshoot (the *N. African Current*) southward, while the main volume, overlapping the southern part of the Labrador Current, traverses the N. Atlantic, sweeps along the shores of Europe, and enters the Arctic Ocean.—The *Pacific Equatorial Current*, corresponding in its principal features to that of the Atlantic, sends its main volume, the *Kuro-Siwo* or *Japan Current*, in a north-easterly and easterly direction along the shores of Japan, the Aleutian Islands, and makes a circuit of the N. Pacific, while a smaller branch (the *East Australian Current*) deflects southward as far as Macquarie Island and Lat. 55°. As with the Gulf Stream in the Atlantic, so is the Kuro-Siwo separated from the coasts of the continent of Asia by a southward-flowing current of cold water, the *Okhotsk Current*.—The *Indian Equatorial Current*, under the names of the *Malabar* and *Mozambique Currents*, flows west and south across the Indian Ocean and through Mozambique Channel, forms the *Agulhas* or *Cape Current*, then bending suddenly eastwards it retrogrades on the 40th parallel, forms the *South Australian Current*, and finally amalgamates with the *East Australian*.—In the vast space of still water caused by the revolving of the waters on the N. Atlantic, is the Sargasso Sea, an immense tract, thickly matted with sea-weed, and also a receptacle for drift wood. In the N. Pacific and South Seas a similar phenomenon is observed, though less markedly.

RACES OF MAN.

Diagram No. 1 illustrates the geographical distribution of the Human Family according to its principal varieties. There are five primary races, the *Caucasian*, the *Mongolian*, the *Ethiopian* or *Negro*, the *Malay*, and the *American*. The *CAUCASIAN*, the most highly developed and most civilized of all the races of mankind, embraces—1. The *Indo-European*, which occupies S.-Western Asia, the greater part of Europe, the United States of N. America, and the British colonies, comprising Hindoos, Persians, Caucasians proper, Slavonians, Teutons, Celts, &c. 2. The *Syro-Arabic*, occupying Arabia and N. Africa, and comprises Syrians, Arabs, Nubians, Copts, Berbers, and Moors. 3. The *Indo-European mixed* races, comprising the Mexicans, Peruvians, and Brazilians. The estimated number of the Caucasian race is 626½ millions.—The *MONGOLIAN* occupies the whole of Asia except the S.-Western parts, extending also along the northern parts of Europe and America, and embraces, in Asia, the Chinese, Indo-Chinese, Tibetans, Japanese, Mongols, Turks, Tungusians, Koriaks,

Kamtchatdales, Chukchees, Yukagiri, and Samoides; in Europe the Finns or Ugrians, and Lapps, and the Esquimaux in America and Greenland. Their estimated number is 460½ millions.—The *MALAY* or *BROWN RACE* inhabits Malaysia or the East Indian Archipelago, Madagascar, and the Isles of the Pacific. They include the Malays proper, the Hawaiians, Tahitians, and the Maoris. Estimated number, 36 millions.—The *ETHIOPIAN* or *NEGRO RACE* inhabits the greater part of Africa, and comprises the Jollofs, Mandingoes, Ashantees, Tibboos, Gallas, Congo Negroes, Makololos, Hottentots, Kaffirs, &c. 2. The *Papuan Negroes* inhabit Papua or New Guinea, and New Caledonia. 3. The *Australians*. Estimated number of the whole Negro Race, 129 millions.—The *AMERICAN ABORIGINAL* or *RED RACE* still occupy immense tracts of N. and S. America, embracing many families from the Chippeways of the North to the Patagonians and Fuegians of the extreme South. Estimated number, 14 or 15 millions.

CLIMATE.

Diagram No. 2 shows the climates of the Earth by *Isothermals*, or lines of equal temperature, which are respectively drawn through all places having the same *mean annual temperature*, as indicated at the sides in

degrees of Fahrenheit. For convenience the divisions, the *Torrid*, the *North* and *South Temperate*, and the *North* and *South Frigid Zones*, are here adopted, and are distinguished by colour.

RELIGIONS.

Diagram No. 3 illustrates the distribution of the principal classes of mankind according to religious belief, and the accompanying Table shows the approximate numbers attributed to each:—

1. CHRISTIANS,

Protestant Sects,	100,000,000
Roman Catholic,	200,000,000
Greek and other Oriental Churches,	80,000,000

2. JEWS,	8,333,000
3. MOHAMMEDANS,	160,000,000
4. HEATHENS, comprising Buddhists, Brahminists, &c.,	660,000,000

Being the total population of the Globe, 1,208,333,000

There are probably upwards of 1,100 different creeds among man kind.

TELEGRAPHS.

The great Telegraphs of the Earth are—1. The *Atlantic Telegraphs* between Ireland and Newfoundland, length, 1,987 statute miles. There were in 1882 five lines of cable connecting Europe with the U. S.—2. The *Cuban Line*, from Havana, Cuba, to Key West, Florida, thence through connections to all parts of the Union.—3. The *Anglo-Indian*, from Constantinople, in connection with the network of European telegraphs, by Diarbekir, Basra, the Persian Gulf, Muskat, Kurrachee, Bombay, Madras, and Calcutta, as far as Rangoon in Further India, from whence it is now extended to China and Australia. The communication to the East is also open by the Mediterranean Line from Genoa, Cagliari, Malta, Tripoli, Bengasi, Alexandria, and Diarbekir.—4. The *Siberian* or *Russian-Asiatic Line*, from Kazan in Russia, which is connected with the European system through Moscow and St. Petersburg, extends eastward by Omsk and Irkutsk

as far as Kiachta on the Mongolian frontier, and thence by the Amoor Valley to Nikolaevsk. This line has several projected branches—1. From Kazan southward to Astrakhan, Teheran, and to Bushire; 2. From Omsk southward to Bokhara, Balk, Cabool, and the Punjab; 3. From Kiachta to Peking and southward probably to Canton by another company, and reaching Australia by the Philippine Islands and New Guinea; 4. From the Amoor southward to Vladivostok; 5. From the mouth of the Amoor, through the Japan Isles, to Yedo.—6. The *Collins Overland Line*, partly completed, but now, however, abandoned, connecting the Siberian Line with North America by Behring Strait and British Columbia. Thence the communication through other connecting lines is complete to all the cities of the United States, thus girding the entire globe between the 46th and 65th parallel: if this line is ever completed, it will form an unbroken line of 19,000 miles in length.

MAP OF NORTH AMERICA.

NORTH AMERICA, one of the great land masses of the globe, only exceeded in area by Asia and Africa, extends from the narrow isthmus of Panama, by which it is united to South America, northward toward the Pole. The continental portion terminates by the Boothia Peninsula at latitude 71° 50' N, and an extensive archipelago extends thence to an unknown distance nearer the Pole. The total length from Panama to Boothia Point is 5,200 miles. The continent extends from Cape Charles, in longitude 55° 30' W, to Alaska Peninsula, 163° W, a distance of about 4,350 miles. On the eastern side adjoin immense insular exten-

sions--West Indies, Newfoundland, Greenland, Iceland, &c., the latter reaching to the 13th meridian of W longitude. The area of this immense continent can only be roughly estimated, probably about 8,000,000 square miles, or more than twice that of Europe, or more than $\frac{1}{3}$ th of the entire land of the globe. Population extremely sparse, showing an average of $7\frac{1}{2}$ persons per square mile.

Scale of Map 380 miles to an inch, one square inch comprising 171 times the area represented by one square inch of Map of England.

NORTH AMERICA

BY J. BARTHOLOMEW, F.R.G.S.

Scale in Miles 0 200 400 600
Scale in Nautical Miles 0 200 400 600
Scale in Kilometers 0 200 400 600

MAP OF THE UNITED STATES OF NORTH AMERICA.

THE UNITED STATES OF NORTH AMERICA, a Federal Republic, occupies the middle portions of the Continent between the parallels of 25° 50' N and 49° N, and between 66° 55' W to 124° 40' W longitude, thus extending through 23° of latitude and 57° of longitude. It is on the same latitudes as Central Europe and the Northern States of Africa. Length from Coast of Maine to Cape Flattery in Washington, 2,820 miles; from Cape Flattery to Cape Sable in Florida, 2,864 miles; breadth from the 49th parallel to Brownsville on the Rio Grande, 1,597 miles. The area exceeds three million square miles, or about one-fifth less than Europe, or 25 times that of the British Isles. The Republic stands at the head of

the civilisation, wealth, and commerce of the Western World, and ranks with the first-class powers of Europe. It consists of 38 States, and the District of Columbia, in which is situated Washington, the capital City, and 10 territories, including Alaska. The total population exceeds that of the British Isles by about one-fourth, giving an average density of 12·6 per square mile, and only in two States of the Union does it exceed that of Scotland, namely, Massachusetts, with 186·8 per square mile, and Rhode Island, with 166·4 per square mile.

Scale of Map 188 miles to an inch, one square inch representing 42 times the area of one square inch on Map of England.

TABLE OF STATES AND TERRITORIES.

NOTE.—The figures in parenthesis after the names indicate the date of admission as States, and for the Territories the date of organisation. The 13 original States of the Union are indicated by an *; the former slaveholding states by a †; and such as confederated in the rebellion of 1861 by two ††.

DOMINION OF CANADA AND NORTHERN UNITED STATES.

THE Dominion of Canada was formed according to Acts of the British Parliament (1867), by the union of the previously distinct colonies of Canada, New Brunswick and Nova Scotia, and the subsequent incorporation of British Columbia and Manitoba, and of Rupert's Land (Hudson Bay Territory), and the North-Western Territory (July 1870). The seat of government is the City of Ottawa.

The two principal provinces, Quebec and Ontario, are almost entirely embraced within the basin of the river St. Lawrence, but occupy only those portions north of the great lakes, and of the river as far as the town of Cornwall, whence eastward they occupy both banks, and are bounded on the south by the United States. The most westerly limit is the heads of the Pigeon and Arrow Rivers, which debouche in Lake Superior. The eastern or maritime provinces embrace no portion of the basin of the great river. The colony of Newfoundland at present forms no part of the Dominion.

Scale of map 81 miles to an inch, one square inch comprising 7.8 times the area represented by one square inch of map of England and Wales.

TABLE OF THE DIVISIONS OF BRITISH AMERICA.

Provinces.	Area.	Pop. 1871.	Pop. 1881.	Capitals.
Ontario (Canada West),	210,020	1,620,842	1,924,323	Toronto.
Quebec (Canada East),	121,260	1,190,505	1,359,012	Quebec.
Nova Scotia,	19,650	387,800	440,585	Halifax.
New Brunswick,	27,720	285,777	321,129	Frederickton.
British Columbia,	230,000	40,000	60,000	Victoria.
Manitoba or Red River Territory,	14,340	11,963	49,509	Fort Garry.
Rupert's Land,	2,200,000 ?	100,000 ?	100,000	Fort York.
North-Western Territory,				Charlottetown.
Prince Edward Island,	2,130	80,500	108,928	
Dominion of Canada,	2,825,120	3,717,387	4,363,486	Ottawa City.
Newfoundland,	57,000	146,536		St. John's.
	2,882,120	3,863,923

MAP OF THE NEW ENGLAND STATES AND LONG ISLAND.

SCALE, 31 miles to an inch. The New England States comprise the six north-eastern States of the Union—viz., Maine, New Hampshire, Vermont, Massachusetts, Connecticut and Rhode Island. Their united area is 68,348 square miles, with a population in 1880, of 4,010,438, in 1870 of 3,487,924. Increase since 1860, 11.25 per cent. They correspond in latitude in the Eastern Hemisphere to France, the north of Spain and Italy, and to the Isle of Yesso in Japan.

STATE OF MASSACHUSETTS.—Area, 7,800 square miles. Population (1880), 1,783,012; increase since 1870, 22.34 per cent. (1870), 1,457,351; (1860), 1,231,066; (1850), 994,514. Increase since 1860, 18.4 per cent. Capital, Boston. It contains 14 Counties.

Counties.	Pop. 1870.	Pop. 1880.	
Barnstable,	32,774	31,945	D g
Berkshire,	64,827	69,049	A f
Bristol,	102,886	139,121	C g
Dukes,	3,787	4,305	D g
Essex,	200,843	244,640	C f
Franklin,	32,635	36,000	B f
Hampden,	78,409	104,117	B f
Hampshire,	44,388	47,235	B f
Middlesex,	274,353	317,951	C f

MAP OF THE MIDDLE STATES, MARYLAND, AND TERRITORY OF THE DISTRICT OF COLUMBIA.

Scale, 33½ miles to an inch.

THE MIDDLE STATES OF THE UNION comprise NEW YORK, NEW JERSEY, PENNSYLVANIA and DELAWARE. Population (1880) 10,644,233. These, including Maryland and the Territory of the District of Columbia, comprise a united area of

114,619 square miles, with a population in 1870 of 9,848,255, of whom 394,981 were colored; increase since 1860, 18 per cent. Density per square mile, 85.9 persons. Total population, 1880, 11,756,503.

STATE OF NEW YORK.—The chief commercial and most populous State of the Union. Area, 47,000 square miles. Population (1880) 5,083,810, divided thus, White, 5,017,116, Colored, 64,969; Native, 3,872,372, Foreign, 1,211,438; Males, 2,506,283, Females, 2,577,527; increase since 1870, 15.99 per cent; (1870) 4,382,769, of whom 58,061 were colored; (1860) 3,880,735; (1850) 3,097,374; increase since 1860, 12.7 per cent. Density per square mile 93.2 persons. Capital Albany. It contains 60 Counties.

(For completion of Long Island on Map, see No. 5.)

* In Census of 1870 no returns.

The Census Bulletin gives a list of 54 Counties, having so small a population in 1880 as not necessary to enumerate in this list, in fact no separate assignment has been given them.

(a) Indian Territory.

TERRITORY OF NEW MEXICO.—Area, 121,201 square miles. Population (1880) 118,430, divided thus, White, 108,127, Colored, 648; Native, 108,495, Foreign, 9,932; Males, 63,751, Females, 54,670; increase since 1870, 28.90 per cent. (1870) 91,874, of whom 172 were colored and 1,309 Indians; (1860) 93,516; (1850) 61,547. Capital, Santa Fé. It contains 14 Counties.

Counties.	Pop. 1870.		Counties.	Pop. 1870	
Bernalillo,	7,591	C b	San Miguel,	16,058	D b

MAP OF WEST INDIES, MEXICO, ETC.

THE WEST INDIES, or WEST INDIA ISLANDS, is an extensive archipelago of Tropical America, forming a chain of islands between the peninsula of Florida and the coast of Venezuela, and separating the waters of the Caribbean Sea from the Atlantic Ocean. It consists of four great groups,—the Great and Little Antilles, the Bahamas, and the Leeward Islands of the Spaniards—the latter forming a chain along the Venezuelan coast. Only one of the islands has independent governments, namely, Haiti, which is the seat of two Republics.

The following table shows the population and areas of the various islands, the countries to which they belong, and by whom first occupied:

† It is uncertain whether the treaty of Oct. 2, 1867, concerning the cession of St. Thomas and St. John to the United States will be ratified.

The FEDERAL REPUBLIC OF MEXICO is the fourth state of the American Continent in point of extent, and the third in population, being exceeded only by the United States and Brazil. Although exceeding by more than six times the area of the British Isles, its population does not amount to that of Scotland and Ireland conjointly. It extends through 17½ degrees of N. latitude, and is intersected by the Tropic of Capricorn. The distance from the N.W. coast of California to Yucatan is 2,050 miles; breadth from 120 to 700 miles.

The REPUBLIC OF VENEZUELA, a state of South America, lying to the east of Columbia, has an area of 368,220 square miles, or about three times that of the British Isles, and a population of 1,565,000, or about one-half that of Scotland. The state was formerly divided into thirteen provinces,

previous to its separation from Columbia, but after the formation of the Confederation, (1863,) the number was to be reduced to seven.

Scale of the Map, 225 miles to an inch; one square inch comprising 31 times the area of one square inch on Map of England.

MAP OF SOUTH AMERICA.

SOUTH AMERICA, the more southerly of the two continents of the western hemisphere, is connected to North America by the isthmus of Panama, and extends in the direction of the meridian from Point Gallinas, lat. 12° 40' N, to Cape Froward, the southern extremity of the continent, lat. 53° 50' S, a distance of 4,540 miles, or 4,760 miles to Cape Horn, which terminates the insular continuations in the same direction, lat. 55° 59' S. The greatest breadth is from Parahiba to Cape Blanco, 3,180 miles. There are remarkably few islands, and none of importance adjoining the continent, and are principally confined to the south-eastern and southern

extremity. The area, of which about three-fourths are within the tropics, is estimated at above 7,000,000 square miles, equal to 1 $\frac{2}{10}$ ths of Europe, $\frac{1}{2}$ th less than North America, and to more than $\frac{1}{4}$ th of the entire land surface of the globe. Population about 27,086,000,—showing an average density of less than 4 persons per square mile. It is thus the most thinly peopled of the continents. The scale of the Map is 298 miles to an inch, one square inch comprising 105 times the area represented by one square inch of Map of England.

TABLE OF THE POLITICAL DIVISIONS OF SOUTH AMERICA, ARRANGED ACCORDING TO POPULATION.

	Designation.	Area in sq. m.	Population.	Density per sq. m.	Capitals.	Pop. of Capitals.
1. BRAZIL,	Empire,	3,430,000	11,780,000	3·6	Rio de Janeiro,	420,000

MAP OF EUROPE

AND THE MEDITERRANEAN SEA.

EUROPE, the smallest of the great divisions of the globe, forms the north-western portion of the Old World, and is properly only an extension of the continent of Asia, from which it is separated by the Ural Mountains and River, by the Caspian Sea, Caucasus Mountains, Black Sea, and Sea of Marmora. On the south, the Mediterranean Sea separates it from Africa. The continent extends through 35 degrees of latitude (36° to 71° 12' N),

and through 75 degrees of longitude (9° 30' W, to 65° 50' E). Distance from Cape St. Vincent to the Ural Mountains, 3,490 miles; from North Cape to Cape Matapan, 2,430 miles. The area is about $\frac{1}{3}$ of that of the entire land surface of the globe, and it has about $\frac{1}{6}$ th of its population. Scale of Map, 265 miles to an inch, one square inch comprising 83.5 times the area represented by one square inch of Map of England.

MAP OF ENGLAND AND WALES.

ENGLAND AND WALES, the southern, larger, and more populous division of the Island of Great Britain, is on a scale of 29 miles to an inch. Its length from north to south on the meridian of Berwick-upon-Tweed is 365 miles, or from Berwick to Land's End 437 miles. Breadth from east to west: North Foreland to Land's End, 335 miles; Lowestoft to St. David's Head, 307 miles; and from Tynemouth to Solway Firth, 67 miles. Its contour is irregular, and presents many extensive estuaries and bays, and extends to about 2,000 miles, exclusive of the islands, which are not numerous. The estimated area of England is 50,922 square miles; of Wales, 7,398; of the Isle of Man and the Channel Isles, 354; total,

58,674 square miles, or nearly half of that of the whole British Isles. It is divided into 52 counties, of which 12 are in Wales. Population, 1861, England, 18,954,444; Wales, 1,111,780; Isle of Man and Channel Isles, 143,447; total, 20,209,671. Increase since 1851 is 2,138,936. Population in 1871, 22,712,266; in 1881, 25,968,286 (of this, 1,359,895 belonged to Wales). Increase since 1871, 14.34 per cent. The density of population varied from 7.817 per square mile in Middlesex, 1.313 in Lancashire, 3.48 in Yorkshire, 1.095 in Surrey, to 80 in Westmoreland, 65 in Radnor—the most thinly peopled county. Average for England and Wales, 344.

MAP OF SCOTLAND.

SCOTLAND, the northern and smaller division of the Island of Great Britain, is on a scale of 21 miles to an inch. One square inch comprises 52, or little more than half the area represented in one square inch of England and Wales. The distance from North to South on the mainland (Mull of Galloway to Dunnet Head) is 288 miles; and from East to West at the greatest breadth (Buchanness to coast of Ross) is 152 miles. The coast line is remarkably broken by estuaries and far-reaching sea-lochs, and extends, exclusive of islands, to 2,500 miles; consequently no part of the country is at a greater distance than 45 miles from the sea. The estimated

area of the mainland amounts to about 26,000 square miles, and the islands to 4,685, making the total area of 30,685 square miles, or more than one-half that of England. The islands are 787 in number, of which 186 are inhabited. It is divided into 33 counties, and had, in 1861, a population of 3,062,294, or less than one-sixth of that of England; in 1871, 3,360,018; in 1881, 3,734,441. The density of population varies from 746 per square mile in Edinburghshire and 710.04 in Lanarkshire, to 13.3 in Sutherlandshire, the most thinly peopled county. Average for Scotland, 99.7, or within a fraction of 100 persons per sq. m.

MAP OF IRELAND.

IRELAND, the smaller, and most westerly of the two chief islands of the British Group, forms an integral part of the United Kingdom of Great Britain and Ireland, and is the most westerly country of Europe. The greatest length is, from Fair Head to Mizen Head, 300 miles, greatest breadth 173 miles. The area is more than half, and the population is about two-sevenths of that of England and Wales.

The population at various periods was as follows: in 1821, 6,801,827; in 1831, 7,767,401; in 1841, 8,196,597; in 1851, 6,574,278; in 1861, 5,798,967; in 1871, 5,412,377; in 1881, 5,159,839, divided into 2,522,804 males, and 2,637,035 females, of which about 3,951,888

were Roman Catholic, 635,670 Episcopalians and 485,503 Presbyterians. Decrease since 1821, 1,641,988. Decrease since 1871 of 252,538 persons. Ireland is divided into 4 provinces and 32 counties. The density of population per square mile in Ulster, 233; in Leinster, 191; in Munster, 160; in Connaught, 133. Dublin, 1,159 per square miles, is the most densely peopled, and Galway, 173, the most thinly peopled county. Average for Ireland, 178.

The Map is on a scale of 49 miles to an inch, one square inch representing 42 of one square inch of Map of England.

TABLE OF PROVINCES AND COUNTIES, WITH THEIR AREA AND POPULATION.

Longitude West of Greenwich

T. Elwood Zell, Philadelphia.

Engraved & Printed in Colours

MAP OF FRANCE AND SWITZERLAND.

FRANCE, one of the largest and most important countries of Europe, extends through $8\frac{1}{2}^{\circ}$ of latitude, and nearly 12° of longitude, or between $42^{\circ} 20'$ and $51^{\circ} 6' N.$, and between $4^{\circ} 40' W.$ and $7^{\circ} 10' E.$ longitude. It is on the same latitude westward as New Brunswick, and eastward as the Sea of Azof and Manchooria. Distance from west coast of Finistère to Mentone on the Mediterranean, 685 miles; from Dunkirk to south of Pyrénées orientales, 603 miles; from Point St. Matthieu in Finistère to the Vosges Mountains, 560 miles. France ranks sixth in area and third in population among the States of Europe. The seaboard amounts to 1,500 miles, and its land frontiers to about 1,000 miles. The Map is on a scale of 59 miles to an inch, one square inch comprising 4.1 times the area of one square inch on the Map of England.

France was formerly divided into 34 provinces, which were re-divided in 1789 into 85 departments, or 86 including Corsica, to which, in 1859, were added Savoie, Haute Savoie, and Alpes Maritimes, acquired from

Italy. They are invariably named after some river, mountain, or other natural feature connected with them. By treaty of Brussels, June 1871, there were ceded to Germany the departments of Bas Rhin or Lower Alsace, Haut Rhin or Upper Alsace with the exception of Belfort and its vicinity; the greater part of Moselle, and portions of Meurthe and Vosges, which now form the German province of Alsace-Lorraine, with an area of 5,014 square miles, and a population of 1,608,505.

The most densely peopled departments are Seine, Nord, and Rhône, which have respectively 11,754, 635, and 630 persons per square mile. The most thinly peopled are Hautes Alpes, 57, and Basses Alpes, 53 per square mile. Average for France, 182 per square mile.

The provinces are no longer officially recognised, but are still familiarly used, and retain their place in history. A table of these former divisions, with their corresponding departments, is therefore subjoined, and they are also indicated upon the Map.

SWITZERLAND (German, *Die Schweiz*; French, *La Suisse*; Italian, *La Svizzera*), a Confederate State of Central Europe, is one of its smallest. Length, 216 miles; breadth, 140 miles. Area, 15,716 square miles, equal to about half that of Scotland. Pop., 2,510,494, or 160 per square mile. The Swiss Confederation consists of 22 Cantons, and comprises 25 distinct Republics, united by a Federal Council, which meets at Berne. Two-thirds of the surface are occupied by lofty mountains, while the remainder consists of an elevated plateau, on which are many extensive lakes.

MAP OF THE GERMAN EMPIRE, HOLLAND, AND BELGIUM.

SCALE, 43 miles to an inch, one square inch comprising 2·2 times the area represented by one square inch of Map of England.

Germany (German, *Deutschland*; French, *Allemagne*; ancient *Germania*) comprises twenty-six states or sovereignties and the imperial province of Alsace-Lorraine, acquired from France by conquest, 1871, which are now unified as the *German Empire*, having Berlin as the imperial capital, and the King of Prussia, William III., Emperor. It

is exceeded in area only by Russia, Austria, and Sweden and Norway. It extends through 8½° of north latitude, corresponding with that of Newfoundland and Labrador, and with the Amour River. Length from north to south (Königsau to S. Bavaria), 568 miles; from east to west, 735 miles. Area, 210,211 square miles. Population (1880), 45,194,172.

TABLE OF STATES COMPREHENDED IN THE GERMAN EMPIRE.

* Situated in Thuringia (*Thüringen*), an ancient margraviate of Germany.
† Acquired from France 1871.

THE KINGDOM OF PRUSSIA (*Königreich von Preussen*) is one of the Great Powers of Europe, and takes the seventh rank according to area and population. Its area is 2·31 times greater than that of England and Wales. The density of the population varies from 323 per square mile in the Rhine Provinces to 118 in Pomerania. Average density, 177 per square mile.—The following Table shows the area and population of the different Governments and Provinces.

Governments, Provinces, &c.	Area in sq. m.	Pop.	Governments, Provinces, &c.	Area in sq. m.	Pop.	Governments, Provinces, &c.	Area in sq. m.	Pop.

GERMAN EMPIRE HOLLAND & BELGIUM.

BY J. BARTHOLOMEW, F.R.G.S.

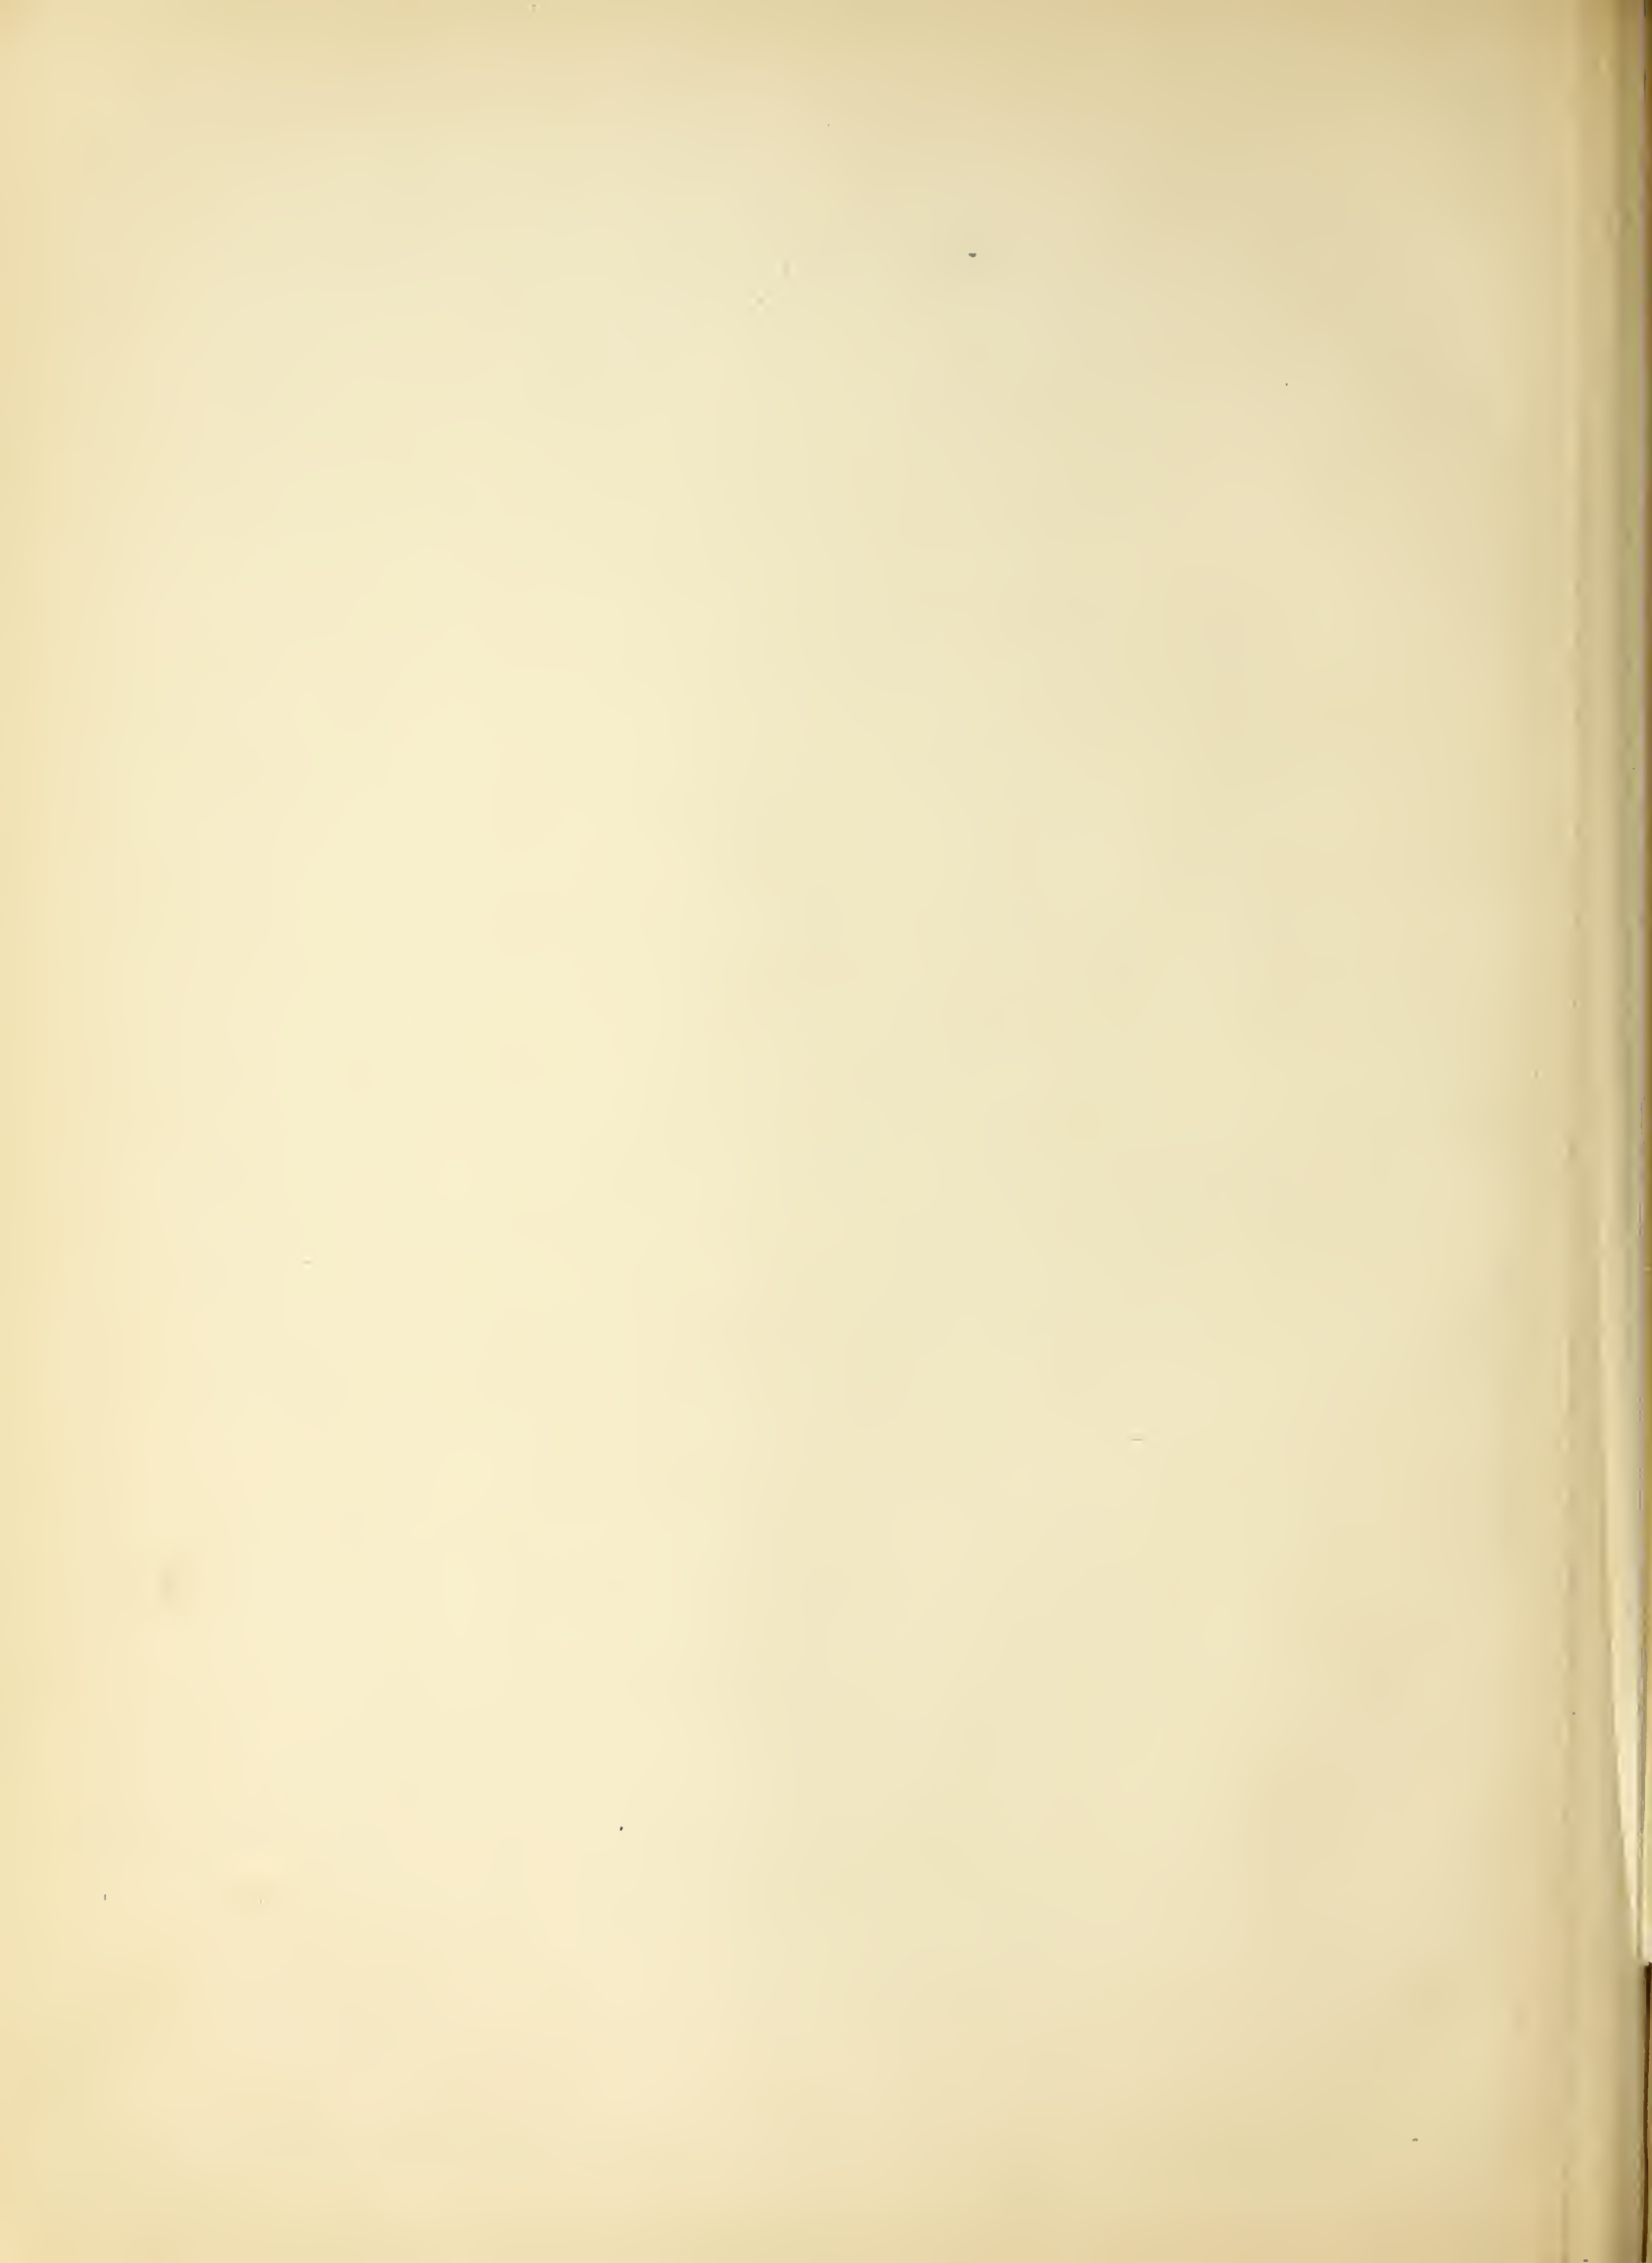

Explanation of Characters

Towns above 100,000 inhabitants	BERLIN
" from 50,000,000	STETTIN
" 20,000,000	Bonn
" under 20,000	Heidelberg
	Bingen

The Governments (Regierungsbezirke) of Prussia & the Circles (Kreise) of Saxony & Baden are named after their principal towns which are underlined Oppeln.

Railways in Operation.

Longitude East of Greenwich

MAP OF SWEDEN, NORWAY, DENMARK, AND THE BALTIC.

THE KINGDOM OF NORWAY (Norwegian, *Norgé*; Swedish, *Norrige* or *Norrike*) and the KINGDOM OF SWEDEN (Swedish, *Sverige* or *Svea-rika*), now united under one sovereign, occupy the entire great peninsula of northern Europe, called by the ancients *Scandinavia*, and comprise together an area second only to Russia in Europe, and equal to $2\frac{2}{3}$ times that of the British Isles, but with only $\frac{1}{3}$ th of the population. The average density per square mile is for Sweden 24.6, and for Norway 13.8 persons. In Sweden 16,488 square miles are occupied by lakes. The monarchy extends through nearly 16 degrees of latitude, namely, from 55° 20' to 71° 15' N, of which about $4\frac{1}{2}$ are within the Arctic Circle. Length from Nordkyn to Sandhammar Point, 1,163 miles; from the Naze to the

Domen, 1,153 miles. Greatest breadth, 510 miles. The country is on the same latitudes as Greenland and Alaska westward, and of Siberia eastward.

The KINGDOM OF DENMARK (Danish, *Danmark*), one of the smallest states of Europe, is nearly equally divided into a mainland portion, or the peninsula of Jutland, and an extensive group of islands. Its area is less than half, and its population rather more than half of that of Scotland. Density per square mile is 126 persons.

The scale of the Map is 79 miles to an inch; one square inch comprising about $7\frac{2}{3}$ times the area represented by one square inch on the Map of England.

MAP OF RUSSIA IN EUROPE, &c.

THE Russian Empire ranks next to the British in extent of surface, being the second largest in the World, while in population it is surpassed only by those of the Chinese and British. It has five grand divisions, viz.:—Russia Proper, the Lieutenancy of Caucasia, Siberia, the Kingdom of Poland, or Vistula Province, and the Grand Duchy of Finland, which are subdivided into 78 governments, 10 provinces, and 5 territories (of which Siberia has 4 governments and 10 provinces). The divisions into Great and Little Russia, &c., although in common use, as well as the limits of European and Asiatic territory, are not officially recognised. Two of the governments, Perm and Orenburg, and the lieutenancy of Caucasia, are even situated partly in both continents, being respectively intersected by the Ural and Caucasus mountains. Russia in Europe, with Caucasia, &c., is by far the largest and most

populous country west of the Urals. Greatest length from NW to SE, through 33° of latitude, 2,360 miles. Greatest breadth, 1,950 miles. Area, 2,266,000 square miles—about 18·5 times that of the British Isles. Population (1864), 72,644,000, or 2·4 times that of the British Isles.

The table of Governments is arranged according to the density of population. Ex.—Moscow, the most densely peopled, 122; Archangel, the most thinly peopled, 0·96; Podolia, 113·9; Kiev, 102; Bessarabia, 76; St. Petersburg, 48; Cossacks of the Ural, 4; Poland, 123; Finland, 12·5: Total of Russia, &c., 32; Russian Empire, 10·3 per square mile.

The Map is on a scale of 158 miles to an inch, one square inch representing 29·7 times the area of one square inch of the Map of England.

SERVICE DEPT.

"BETTER CHANGE TO ETHYL!"

THE automobile dealer who wants you to be a dealer. And this is what dealers say: "When your car knocks more apt to knock in summer the new, smaller cars with the high compression engines."

"We could stop knock spark—but that would make hotter and lose a lot of power your spark properly advanced Ethyl. That will bring out the hottest days and keep you cooler."

Take this hot weather tip now—change to Ethyl and get from your car this summer!

FACTS you should know

1. Pumps marked Ethyl fuel for summer use.vents harmful knock, violent in summer. Thus, energy of each gallon formed into engine power waste heat to the cooling battling high outside

2. Ethyl fluid is needed performance by modern cars every season of older cars, too, run by mileage accumulate. That's why 95% of all premium in the United States contains Ethyl fluid.

3. Sufficient Ethyl fluid (ethyl lead) is used to anti-knock rating by methods of the oil companies. The all-round oil so treated is protected at the refinery and at

To get all the power from your car investment, use

MAP OF AUSTRIA.

THE EMPIRE OF AUSTRIA (German, *Das Oesterreichische Kaiserthum*), a State of Central Europe, holds the fifth rank among the five great powers, and takes the third place in point of area and the fourth in population. It has nearly double the area of the British Isles, and the population is about one-sixth greater. The Empire extends between 8° 35' E and 26° 35' E, or through 18° of longitude, and between 45° and 51° N, but extending in Dalmatia to latitude 42° 9' or through about 9° of latitude. It is on the same latitudes as France and New Brunswick westward, and as South Russia and Manchuria eastward. Distance from the Rhine on

the east to R. Suczawa in Bukowina, 785 miles; from north to south on the 20th meridian, 378 miles; and from N of Bohemia to the southern extremity of Dalmatia, 655 miles. Only a comparatively small part of its extensive frontier consists of sea coast.

By Imperial decree, 14th November 1868, the name Monarchy of AUSTRO HUNGARY was adopted.

The scale of the Map is 59 miles to an inch, one square inch comprising 4½ times the area represented by one square inch on Map of England.

TABLE OF THE DIVISIONS.

† I. Cisleythian Countries.					† II. Transleythian Countries.				
	Area in Eng. sq. m.	Pop.	Pop. per sq. m.	Capital.		Area in Eng. sq. m.	Pop.	Pop. per sq. m.	Capital.
Grand Duchy of LOWER AUSTRIA (Oesterreich unter der Enns),	7,654	2,143,928	255.2	Vienna.	Kingdom of HUNGARY (Ungarn, Hungarian, Magyar-Ország),	87,043	11,532,810	134	Buda-Pesth.
Grand Duchy of UPPER AUSTRIA (Oesterreich ober der Enns),	4,631	746,097	157.8	Linz.	Prov. of CROATIA (Kroaten), and SLAVONIA, or SCLAVONIA (Slavonien),	16,773	1,821,913	136.2	Agram.
Duchy of STYRIA (Steiermark),	8,670	1,178,067	130.4	Gratz.	Prov. of TRANSYLVANIA (Siebenbürgen),	21,215	2,191,632	99.4	Klausenburg.
Prov. of CARNIOLA (Krain),	3,856	467,996	120.1	Laibach.	Town of Fiume,	8	18,171	Tremesvar.
Prov. of CARINTHIA (Kärnten),	4,007	338,705	83.9	Klagenfurt.	Total II.,	125,039	15,564,526	123.9	
Prov. of TYROL (Tirol), with	11,324	895,658	77.6	Innsbruck.	Turkish Provinces (under Berlin Treaty).				
VORARLBERG,	2,768	154,181	54.7	Salzburg.	Bosnia,	16,417	862,202	Bosna-Serai.
Duchy of SALZBURG,	20,060	5,361,506	245.9	Prague.	Herzegovina,	4,308	207,970	Mortar.
Kingdom of BOHEMIA (Böhmen),	1,987	558,196	257.3	Troppau.	Novi-Bazar,	3,572	142,000	Novi-Bazar.
Prov. of SILESIA (Schlesien),	8,583	2,079,826	234.4	Brünn.	Total	24,297	1,212,172		
Prov. of MORAVIA (Mähren),	30,307	6,000,326	178.6	Leibnitz.	Grand Total.,	265,242	38,341,198		VIENNA.
Prov. of GALICIA (Galizien),	4,035	548,578	124.3	Czernowitz.					
Prov. of BUKOWINA,				Goertz.					
Goertz (Goertz),				Gradisca.					
Gradisca,				Rovigno.					
Istria (Istrien),				Trieste.					
Trieste (Triest),				Zara.					
Kingdom of DALMATIA (Dalmatien),	4,940	467,534	93.4						
Total I.,	115,906	21,564,500	173.6						

† From the River Leytha, which separates Hungary from Lower Austria.
‡ These formed part of the Germanic Confederation of 1815 until its dissolution in 1866.
§ These formed the 'Kingdom of ILLYRIA' previous to 1849.
¶ Polish Provinces.

Of the population, 66 per cent. are Roman Catholics; Greek Church, 20; Protestants, 10; Jews, 3 per cent.

MAP OF ITALY, TURKEY IN EUROPE, AND GREECE.

INDEX TO ITALY.

SCALE 80 miles to an inch. One square inch comprises 7·6 times the area represented by one square inch on Map of England.

ITALY (Italian, *Italia* ; French, *Italie* ; German, *Italien*) embraces the central peninsula of Southern Europe, part of the continent south of the Alps, and many islands, some of which are of considerable size. It extends, in a north-westerly and south-easterly direction, through nearly 9 degrees of latitude and $11\frac{1}{2}$ degrees of longitude. The coast line extends to about 3,350 miles, one-third of which is insular. Length from Mont Blanc to Cape Santa Maria di Leuca 725 miles, or 780 miles to Cape Portio di Palo in Sicily. Length of continental portion, 360 miles. Average breadth of peninsula about 100 miles.

The KINGDOM OF ITALY now comprises the whole country. The occupation of the Pontifical States by the national troops in September 1870 has deprived the Pope of temporal dominion ; and in June 1871 the city of Rome was restored to her precedence as capital of Italy.

The REPUBLIC OF SAN MARINO, one of the smallest and most ancient

States of Europe, is enclosed on all sides by the kingdom. Lat., 43° 55' N. Long. 12° 30' E. The isle of Corsica, geographically connected with Italy, forms one of the departments of France, and the Maltese Group forms an important dependency of Great Britain. The Kingdom of Italy is divided into 73 provinces, which mostly bear the name of their respective chief towns (underlined upon the Map), and are referable to fifteen principal but non-official districts (*compartimenti territoriali*), of which the names are familiar and of long standing. The total population of the kingdom is about one-eighth greater than that of England. The area is about one-eighth less than that of the British Isles. The most densely peopled districts are Lombardy, Piedmont, Emilia, and Venetia, which have respectively 346, 266, 249, and 249 per square mile. Sardinia, 61. Average for Italy, 229 persons per square mile.

In the following table the former names of provinces are given within brackets. Those in *Italics* express the Italian names when they differ from the usual English forms.

TABLE OF PROVINCES.

Provinces.	Area in sq. m.	Pop.	Provinces.	Area in sq. m.	Pop.	Provinces.	Area in sq. m.	Pop.
1. Alessandria,	1,951	645,607	25. Ancona,	739	254,849	53. Caltanissetta,	1,499	223,178
2. Cuneo,	2,754	597,279	26. Ascoli Piceno,	809	196,030	54. Catania,	1,824	450,460
3. Genoa (<i>Genova</i>),	1,588	650,143	27. Macerata,	1,056	229,626	55. Girgenti,	1,269	263,880
4. Novara,	2,525	579,385	28. Pesaro e Urbino,	1,144	202,568	56. Messina,	1,699	395,139
5. Porto Maurizio,	467	121,330				57. Palermo,	1,640	555,163
6. Turin (<i>Torino</i>),	3,964	941,992				58. Siracusa (Noto),	1,436	259,613
			V. THE MARCHES,	2,949	883,073	59. Trapani,	1,058	214,981
I. PIEDMONT (<i>Piemonte</i>) and LIGURIA,	13,249	3,535,736	29. Perugia,—VI. UMBRIA,	3,685	513,019

INDEX TO TURKEY IN EUROPE AND GREECE.

TURKEY IN EUROPE (Turkish, *Islam*), the chief great division of the OTTOMAN or TURKISH EMPIRE, consisted of the greater part of its south-eastern peninsula, and an adjoining portion of the main mass of the continent, between latitude 39° and 48° 20' north, longitude 15° 40' and 30° 15' east, with the island of Crete, or Candia, and several others. Distance from the Pruth in North Moldavia to Previsa, 725 miles; from Constantinople to the frontier of Croatia, 750 miles; from the Gates of the Danube to Salonika, 288 miles. The area is about 209,000 square miles, or about 1.7 that of the British Isles. The population is very uncertain, official estimates varying between 15,000,000 and 21,000,000. The country is very thinly peopled, even the latter figure only showing 100 per square mile. The Mahometan religion is professed by about 6,000,000; Greek Christians, &c., 12,000,000; Jews, 70,000. The former geographical division of Turkey, Albania, Bulgaria, Rumili, &c., although familiar to western nations, are not officially recognised.

Governments.	Area in sq. m.	Pop.	Capitals.
Constantinople.	19,562	2,900,000	Constantinople.
Vilayet of Edirne (Adrianople),	39,096	3,000,000	Adrianople.
Vilayet of the Danube (Bulgaria),	22,188	1,100,000	Rustchuk.
Vilayet of Bosnia, or Bosnia,	18,942	1,200,000	Bosna Serai.
Mutessariflik of Perzerim,	16,756	2,760,000	Prisrend.
Eyalet of Roumelia,	12,208	500,000	Bitolia.
of Trikhala (Thessaly),	11,926	210,000	Trikhala.
of Janina,	3,326		Janina.
of Selanik (Salonika),			Salonika.
Djizairi Bahri Sefid (Isles of the Mediterranean),			Rhodes.
Kaimakamlik of Sissan (Samo),			Candia.
Eyalet of Ghirit (Crete or Candia),			
I. IMMEDIATE POSSESSIONS,	144,004	11,610,000	

* For administrative purposes the province of the Isles of the Mediterranean is included in Turkey in Europe. It comprises the Isle of Cyprus.

Governments.	Area in sq. m.	Pop.	Capitals.
Eyalet of Effak (Danubian Principalities, or Roumania),	46,700	4,605,510	Bukharest.
„ Sirp (Servia),	16,820	1,222,000	Belgrade.
Principality of Montenegro,	1,700	100,000	Cetignue.
II. PROTECTORATES,	65,220	5,927,510	
TOTAL OF TURKEY IN EUROPE,	209,224	17,537,510	Constantinople.
III. POSSESSIONS IN ASIA,	672,490	16,463,000	
IV. PROTECTORATES IN AFRICA,	1,047,064	9,165,000	
TOTAL OF THE TURKISH EMPIRE,	1,928,778	43,165,510	

THE KINGDOM OF GREECE (Greek, *Hellas*; French, *Grèce*; Arabic, *Roum*), one of the smallest and least important countries of Europe, embraces the southern extremity of the great peninsula, occupied principally by Turkey, and comprises also a multitude of islands. The total area is equal to about two-thirds, and the population two-fifths, that of Scotland. The density per square mile is 67.

Nomarchies.	Area in sq. m.	Pop. in 1861.	Capitals.
Livadia, Roumelia, or N. Greece.	2,475	116,024	Athens.
Attica and Boeotia,	2,374	109,392	Zeitunia.
Phthiotis and Phocis,	2,939	102,291	Missolonghi.
Acarnania and Ætolia,	1,699	77,368	Egripos.
Eubœa, or Negropont,	1,940	112,910	Nauplia.
Argolis and Corinth,	1,692	113,719	Tripolitza.
Morea, Arcadia,	1,632	96,546	Sparta.
Peloponnesus, or S. Greece.	1,329	117,181	Calamata.
Laconia,	2,005	138,249	Patras.
Messenia,	1,060	118,130	Syra.
Elis and Achaia,	1,007	251,712	Corfu.
Cyclades,			
Ionian Isles,			
TOTAL OF GREECE,	20,152	1,348,522	Athens.

Of the total population, 318,535 are in the mainland, 552,414 in the Morea, and 225,861 in the islands. Population (1879), 699,775.

Longitude East of Greenwich

Philadelphia.

MAP OF SPAIN AND PORTUGAL.

THE south-western extremity of the Continent of Europe forms an extensive peninsula, commonly known as the Spanish, Iberian, or Pyrenean, and is occupied by the independent States of Spain and Portugal, though consisting naturally of but one region. It is connected with the main mass of the Continent on the north-east by a broad isthmus traversed by the Pyrenees. The Peninsula extends through nearly 8 degrees of north latitude, and nearly 13 degrees of longitude, or between 36° and 43° 50' N., and between 3° 22' E. and 5° 28' W. longitude. It is on the same latitudes westward as Virginia and New York, and eastward as Asia Minor and North China. The distance from Tarifa Point to Cape de Penas, is 530 miles; from Cape Creux to Cape de Tourinan in Galicia, 648 miles. Area, 227,220 square miles.

The Map is on a scale of 51 miles to an inch; one square inch comprising about 3 times the area represented by one square inch on Map of England.

SPAIN (Spanish, *España*; Ancient, *Iberia*, *Hispania*) occupies more than $\frac{5}{6}$ ths of the peninsula, and forms, with the Balearic Isles, a State of second-rate power in Europe. It takes the sixth rank in respect to size, and the seventh in respect to population. It is more than a half larger than the British Isles, while it has little more than half of its population. Average density per square mile is 84 persons. Spain was formerly divided into 14 great districts or provinces, which are still familiarly used; but has been since 1833 divided into 48 provinces, each named after its chief town. Madrid is the capital of the Country.

TOTAL,			15,752,667	

THE KINGDOM OF PORTUGAL (ancient *Lusitania*) occupies the southwestern portion of the Iberian Peninsula, and forms the extremity of the continent of Europe to the westward. Distance from north to south, 358 miles; greatest breadth, 134 miles. The area little exceeds that of Ireland.

The average density of population is 109 persons per square mile. Portugal is divided into 8 provinces, including the islands, and are in common use; but since 1835 the kingdom has been divided into 20 districts, each named after its chief town. Lisbon is the capital of the kingdom.

MAP OF ASIA.

ASIA, the largest of the continents and the nucleus of the Old World, surpasses the united area of Europe and Africa, and is nearly equal to the joint masses of North and South America. It is inhabited by more than one-half of the entire population of the world, but very unequally distributed over its surface,—about one-half being confined to China and India, which have together a density of 151 persons per square mile, while the

average density of the rest of the continent is only 14. The continent lies entirely in the Northern Hemisphere. The distance from Cape Baba to East Cape is 7,000 miles; the distance along the 30th parallel is 5,390 miles; from Singapore north to the Arctic Ocean 5,500 miles.

The scale of the Map is 520 miles to an inch, one square inch comprising 310 times the area represented by one square inch on Map of England.

TABLE OF THE STATES OF ASIA.

	Designation.	Area in sq. m.	Pop.	Capitals, or Principal Cities.	Pop. of Capitals.

MAP OF TURKEY IN ASIA, PERSIA, ARABIA, EGYPT, ETC.

THE TURKISH or OTTOMAN EMPIRE in Asia consists of the peninsular provinces of Asia Minor and the adjoining parts of the main mass of the continent, extending nearly to the Isthmus of Suez on the S.W., to the Persian Gulf on the S.E., and as far E. as the plateau of Persia. It also embraces the entire western maritime regions of the peninsula of Arabia from the Isthmus of Suez to the Strait of Bab-el-Mandeb, thus extending through 29½ degrees of latitude and 22½ of longitude. The distance from Cape Baba in the W. to the Persian Gulf is 1,400 miles; from Sinope to the Isthmus 850 miles; thence to the Strait 1,420 miles. In the Arabian provinces the density of population per square mile is 5·6 persons; in Asia Minor, 50·4;—average density, 24·5. The Pashalik of EGYPT, with its dependencies, Nubia, Kordofan, &c., is a tributary state of the Turkish Empire. Density of population per square mile, 14·5.

TURKISH OR OTTOMAN EMPIRE.

EGYPT (Pashalik), NUBIA and KORDOFAN,	651,110	7,465,000, 2,000,000	Cairo, Khartoom.	313,383, 30,000
		9,465,000		

PERSIA, or *Iran*, a kingdom of Western Asia, East of Turkey, occupies the plateau between the Caspian Sea and the Persian Gulf. Area, 648,000 square miles. Population not more than 10,000,000. Average density per square mile, 15. Capital city, Teheran.

EL NEJD, or NEJED, an empire of Central Arabia separated on all sides by a "Sea of Sand," embraces the dependency of El Ahsa or Hasa, on the E. coast of the peninsula, and claims tribute from the kingdom of JEBEL SHOMER on the north. Riad is the Cap. of Nejed proper, former Cap., Dereyeyah. Cap. of Jebel Shomer, Hayel; of Hasa, Hofhoof.

The Sultanate of OMAN or 'Aman occupies the south-eastern seaboard of the Arabian peninsula, and has dominion over the opposite Persian coast and adjoining islands, also the island of Socotra and the Zanzibar coast of Africa.

POPULATION OF ARABIAN STATES.

Provinces of Nejed, Beduin Tribes,	1,219,000, 76,500
Provinces of Jebel Shomer, Beduin Tribes,	1,295,500, 274,000, 166,000
	440,000
TOTAL OF NEJDEAN EMPIRE,	1,735,500
Omanee Sultanate, in Arabia, On Persian coast,	1,980,000, 300,000
TOTAL OF OMAN,	2,280,000

ABYSSINIA, *Abessinia*, or *Habesh*, a mountainous country of Eastern Africa comprising several independent states, of which the principal are Tigré, Amhara, and Shoa. Area, 97,000 square miles. Population, 4,500,000.

The scale of the Map is 198 miles to an inch. One square inch comprises 46·6 times the area represented by one square inch on Map of England.

**TURKEY IN ASIA,
PERSIA, ARABIA,
EGYPT & NILE COUNTRIES.**

BY J. BARTHOLOMEW, F.R.G.S.

Scale: 1 inch = 100 miles
1:625,000

Longitude East of Greenwich

MAP OF PALESTINE, ANCIENT AND MODERN,

WITH PART OF NORTHERN SYRIA.

PALESTINE, CANAAN, or the HOLY LAND, a country of Asiatic Turkey, at present forms part of the Pashalik of Syria and Lebanon, extending between latitudes 30° 40', and 33° 32' N., and from 34° to 36° 45' E. longitude. On the North it is bounded by the mountains of Lebanon and the Vale of Litany or Leontes. On the East it merges into the Syrian Desert; and on the South into the Desert of Sinai. Length, North to South, about 185 miles; breadth from 80 to 90 miles; area about 12,500 square miles, nearly equal in extent to the six northern counties of England. The governor of the Pashalik resides alternately at Damascus and Beirut. The ancient Roman provinces,—

Galilee, Samaria, Judea, and Perea—are indicated on the Map, and the more ancient divisions of the country into tribes, which are very uncertain, on the supplementary Sketch Map. Scale of Map, 16½ miles to 1 inch.

Explanation of Colours.—The parts tinted *green* are the coasts, plains, and valleys, from the sea-level to 500 feet of elevation; also the great depression of the Jordan Valley (El Ghor), which from above the Sea of Galilee down to lat. 31° is below the level of the Mediterranean. The *buff* tint indicates the hills and plateaus from 500 to 3000 feet high. The *grey* tint shows the mountains and regions above 3000 feet.

EXPLANATION OF ARABIC WORDS OF FREQUENT OCCURRENCE ON THE MAP.

PALESTINE

ANCIENT AND MODERN

BY J. BARTHOLOMEW, F.R.C.S.

English Miles 69 16-1 Deg

MAP OF INDIA, AFGHANISTAN, BELOOCHISTAN, ETC.,

INDIA, in the widest acceptance of the name, embraces the two great peninsulas of south-eastern Asia, separated from each other by the Bay of Bengal. The most easterly of these is generally known as Further India, India beyond the Ganges, or the Indo-Chinese Peninsula. The western portion is known as India proper, or Hindostan; and is the larger, more populous, and richer of the two. They are often distinguished as the "East Indies," from the West Indies of America. The term Hindostan, "the country of the Hindoos," is applied by the natives only to that portion lying north of the R. Nerbudda (lat. 22° N.). INDIA, the "Pearl of the British Crown," consists of an extensive section of the main mass of the continent of Asia south of the Himalayas, as well as the extensive peninsula or Deccan ("South") which has the Isle of Ceylon near its southern extremity. It consists of four main sections: British India,

Protected Native States, which are very numerous, Independent States, and Foreign Possessions (see table). It extends in the direction of the meridian for 2,030 miles from Bulti to Cape Comorin, and 1,885 miles from east to west on the 27th degree of N. latitude. Its area is equal to about $\frac{2}{3}$ ths of Europe, or more than 13½ times greater than the British Isles. Population equal to $\frac{2}{3}$ ds of that of Europe, or about 6½ times that of the British Isles. The combined population of the entire Western Hemisphere with that of Australia does not equal half of the population of India, which is only second to China in density, having an average of 120 persons, and in the North-West Provinces, of 328, per square mile.

Scale of Map, 194 miles to an inch. One square inch comprises 44½ times the area represented by one square inch on Map of England.

TABLE OF THE ADMINISTRATIVE DIVISIONS OF INDIA.

						1,652,272	198,128,990		

AFGHANISTAN, a country west of the Punjab, formerly a monarchy, but now divided into three independent principalities, Herat, Candahar, and Cabool, with capitals of the same name. Seistan is tributary to Herat, and Sewestan to Candahar.

The Khanates of Balkh and Kunduz are geographically connected with the region of Turkestan (see Map of Asia). The area of Afghanistan proper is estimated at 210,500 square miles. Population, 5,120,000. Density per square mile, 24.4. It is equal to about 1½ths of the British Isles, with a population of little more than ¼th.

BELOOCHISTAN, a country south of Afghanistan, comprises the following divisions or provinces, which are governed by chiefs who acknowledge the

supremacy of the Khan of Kelat:—Cutch Gundava, Sarawan, Kelat, Jhalawan, Lus, Mekran, and Kuhistan. Area estimated at 192,000 square miles, or 1½ of the British Isles. Population very uncertain, variously estimated from 500,000 to 2,000,000.

BURMAH, the Birman or Burman Empire, or Kingdom of Ava (Burmese *Byam-ma* or *Bram-ma*), a country east of Bengal, and in the Indo-Chinese Peninsula. Capital, Mandalay, and formerly Ava. Area about 184,000 square miles. Population estimated from 3–8,000,000.

SIAM (Siamse *T'hai*, Burmese *Yudra*), a kingdom south of Burmah. Capital, Bang-kok. Area, including the tributary Laos tribes, 261,800 square miles, or more than double the British Isles. Population, 6,000,000†

MAP OF THE CHINESE EMPIRE AND JAPAN.

THE CHINESE EMPIRE, usually considered to embrace the vast section of central and eastern Asia south of Siberia and north of the Indian Peninsula, and washed by the waters of the Pacific Ocean, is in extent equal to more than one-fourth of the whole of Asia, while about one-tenth greater than Europe, comprising densely inhabited regions of the greatest fertility, as well as immense tracts of desert and thinly peopled plains. China proper contains nearly one-third of the human race, and is the most densely populated region of the globe. The province of Kiang-su has double the density of the kingdom of Belgium, although about four times its extent. Several of the divisions exhibited in the accompanying table are but loosely attached to the empire. Thian-shan-nan-loo, or Eastern Turkestan,

had recently thrown off the Chinese yoke, and established an independent Mahomedan government, under the rule of the Ataligh Ghazee, with Yarkand as the capital. In like manner, the Mahomedan inhabitants of the greater part of the province of Yun-nan had established an independence, under a certain Sultan Suleiman, with their capital at the city of Ta-li-foo. The insurrection, since put down, had spread over the provinces of Kan-su, Shan-se and Se-chuen. Corea is nominally tributary to China.

The Map is on a scale of 238 miles to an inch, one square inch representing 67 times the area represented by one square inch of the Map of England.

TABLE OF THE DIVISIONS OF THE CHINESE EMPIRE.

Pe, north; Nan, south; Tung, east; Si, west.

CHINESE EMPIRE AND JAPAN

BY J. BARTHOLOMEW, F.R.G.S.

Statute Miles, 69-16-11 Deg. 300 400

Ports in China and Japan, open by treaty to Foreign Commerce are underlined Shanghai

MAP OF AFRICA.

AFRICA, the second in point of magnitude, the least civilized, and the most unimportant in political influence of the great divisions of the globe, is an immense peninsula connected with Asia by the Isthmus of Suez, and is the only continental portion of the Old World which passes into the Southern Hemisphere. It is separated from Europe by the Strait of Gibraltar and the Mediterranean Sea. The continent extends from Ras el Kerun in Tunis, lat. 37° 40' N., to Cape Agulhas, in lat. 34° 49' S., a distance of 5,050 miles,—its great mass thus lying within the tropics. In breadth it extends from Cape Verd to Cape Guardafui, 4,600 miles. The area is estimated at 11,300,000 square miles,—about three times that of

Europe, and more than $\frac{1}{12}$ th of the entire land-surface of the globe. The population is conjectured to be about 185,000,000, about $\frac{1}{2}$ of that of Europe, and less than that of India. This gives a supposed density of 16 persons per square mile. The area and population of the various regions stated in the following table are, for the most part, extremely uncertain. The information is rather more reliable in the cases of the British Colonies and in the states of Northern and North-eastern Africa.

The scale of the Map is 460 miles to an inch, one square inch comprising 251 times the area represented by one square inch of Map of England

Statute Miles 60-76-1 Deg. 100 0 100 200 300 400 500

MAP OF AUSTRALIA.

AUSTRALIA, the largest island in the world, is only about a fifth less than Europe, its area being nearly 3 million square miles. The distance from east to west (Cape Byron to Steep Point) is 2,600 miles; from north to south (Cape York to Wilson Promontory) is nearly 2,000 miles. The coastline, which has few important indentations, is estimated at 10,000 miles. It lies in the Southern Hemisphere, to the south-east of Asia, between the parallels of latitude 10° and 39°, and between 113° and 153° of E. longitude.

It was first discovered by the Dutch in 1606, who gave it the name of *New Holland*, but it was not till 1788, after its eastern coast was discovered and explored by Dampier, Wallis, and Cook, that the first British settlement was established at Port Jackson, in New South Wales, and was named Sydney in honour of Viscount Sydney, the colonial secretary of

state. The whole island-continent now belongs to Britain, and is divided into the following colonies:—

Names of Colonies.	Area sq. miles.	Population.	Year when Established.
New South Wales,	323,437	(1871) 501,580	1788
West Australia,	978,000	(1870) 24,785	1829
South Australia, including North Australia, Alexandra, and Stuart Land,	906,784	(1871) 185,626	1834
Victoria, formerly Australia Felix, Queensland,	88,408 678,000	(1871) 729,654 (1868) 107,427	1837 1859
Total,	2,974,629	1,549,072

MAP OF NEW ZEALAND AND OF TASMANIA.

THE British Colony of NEW ZEALAND is situated in the South Pacific Ocean, about 1,200 miles south-east of Australia, and is nearly antipodal to the British Isles. It is the most isolated, and, with the exception of Patagonia, the most southerly habitable land of the globe. Its northerly extremity was sighted and named by Tasman in 1642. In 1770, Captain Cook circumnavigated the islands, and passed through the strait that bears its name, taking possession for Great Britain. It was declared a British Colony in 1841. It consists of two extensive islands, called respectively North and South Island, besides numerous smaller isles, of

which Stewart Island is the most southerly and the most considerable. Chatham Isles, lying 550 miles east of Banks Peninsula (*see Map of World*), forms part of the Colony. Length from N. to S., 1,050 miles. The united area, computed at 106,259 square miles, is about $\frac{1}{4}$ th larger than Great Britain. The seat of government has been recently removed from Auckland to the more centrally situated Wellington. Scale of Map 80 miles to an inch; one square inch comprising about $7\frac{1}{2}$ times the area represented by one square inch of Map of England.

TABLE OF THE DIVISIONS OF NEW ZEALAND (*CENSUS OF 1871).

* Excludes the aboriginal natives.

+ With suburbs, 12,466.

The British Colony of TASMANIA is an island lying off the southern extremity of Australia, separated from the colony of Victoria by Bass Strait, in which are several smaller isles attached to the Colony. It is on the same latitude as the Province of Canterbury, New Zealand. From North to South it extends for 235 miles, and from east to west 197 miles. Area 26,215 square miles, or about $\frac{1}{4}$ th less than Scotland, with a population in 1870 of 99,328. The aboriginal population is now

extinct. It is divided into 18 counties. Capital, Hobart Town. Tasmania was named Van Diemen's Land by its discoverer, Tasman (1642), whose own name it now bears, in honour of Anthony Van Diemen, the Governor of Batavia. Convicts with their guards formed the first white population (1803). It was established an independent colony in 1825. Scale of Map same as New Zealand.
